INDEPENDENT AUDITOR'S REPORT

To the Board of Directors and Shareholders of TR Re Ltd.

Opinion

We have audited the consolidated financial statements of TR Re Ltd. and its subsidiaries (the "Company"), which comprise the consolidated balance sheet as of December 31, 2021, and the related consolidated statement of operation, comprehensive income, changes in stockholder's equity, and cash flows, for the period from June 28, 2021 (date of incorporation) to December 31, 2021, and the related notes to the consolidated financial statements (collectively referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2021, and the results of its operations and its cash flows for the period from June 28, 2021 (date of incorporation) to December 31, 2021, in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Company and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a period of one year after the date that the financial statements are issued.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion.

Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited ("DTTL"), its global network of member firms, and their related entities (collectively, the "Deloitte organization"). DTTL (also referred to as "Deloitte Global") and each of its member firms and related entities are legally separate and independent entities, which cannot obligate or bind each other in respect of third parties. DTTL and each DTTL member firm and related entity is liable only for its own acts and omissions, and not those of each other. DTTL does not provide services to clients. Please see www.deloitte.com/about to learn more. Deloitte Ltd. is an affiliate of DCB Holding Ltd., a member firm of Deloitte Touche Tohmatsu Limited.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control. Accordingly, no such opinion is expressed.

- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.

- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Company's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

1. Basis of Presentation and Significant Accounting Policies

Basis of Presentation

TR Re, Ltd., a Bermuda exempted company, together with its subsidiaries (collectively, "TR Re," the “Company,” “we” or “our”) is a leading provider of comprehensive risk solutions for the insurance industry. TR Re was incorporated on June 28, 2021 and registered as a Bermuda Class E insurer effective November 24, 2021. TR Re is a wholly-owned subsidiary of Talcott Life Insurance, Inc. ("TLI"), with an ultimate parent of Talcott Financial Group, Ltd. ("TFG").

The Consolidated Financial Statements have been prepared in accordance with accounting principles generally accepted in the U.S. (“U.S. GAAP”).

On June 30, 2021, TLI's indirect owner, Hopmeadow Holdings GP LLC, completed the sale of the Company (the "Sixth Street Acquisition") through the merger of an affiliate of Sixth Street, a global investment firm, with and into Talcott Holdings, LP ("THLP") pursuant to an Agreement and Plan of Merger (the “Agreement"). Through the Agreement, Sixth Street obtained 100% control of TLI and its life and annuity operating subsidiaries for a total purchase price of approximately $2.25 billion, comprised of a $500 pre-closing dividend and cash of $1.734 billion. The merger was accounted for by using business combination accounting together with an election to apply pushdown accounting. Under this method, the purchase price paid by the investment firm was assigned to the identifiable assets acquired and liabilities assumed as of the acquisition date based on their fair value. Determining the fair value of certain assets acquired and liabilities assumed is judgmental in nature and often involves the use of significant estimates and assumptions.

On December 30, 2021, pursuant to a reorganization approved by the Connecticut Department of Insurance ("CTDOI"), the Company was contributed to TLI from an affiliated company. On the same date, TLI contributed Talcott Resolution Life Insurance Company and its subsidiaries ("TL") to the Company. As a result of the reorganization the Company became a direct parent of TL and thus, the impacts of the contribution are eliminated in consolidation. TR Re’s financial statements are presented from July 1, 2021, the date of the Sixth Street Acquisition, through the period ending and as of December 31, 2021. The Company had no prior activity from its incorporation date through July 1, 2021.

As of December 31, 2021, the Company's life subsidiaries managed approximately 528 thousand annuity contracts with an account value of approximately $45 billion, gross of reinsurance, and private placement life insurance with an account value of approximately $44 billion. Prior to the TL ceasing new sales in 2012, TL previously sold fixed and variable annuities, individual life insurance, retirement plans, payout annuity products, private placement life insurance and group life and group and individual disability benefits. In 2013, TL sold its retirement plans business and substantially all of its individual life business via reinsurance transactions.

On September 17, 2021, TL executed a flow reinsurance transaction with Lincoln National Corporation's insurance subsidiary, The Lincoln National Life Insurance Company ("Lincoln"). Under this reinsurance transaction, the Company coinsured a living benefit rider on variable annuity contracts issued by Lincoln between April 1, 2021 and June 30, 2022 up to a maximum of $1.5 billion of reinsured deposits. Lincoln continues to service and administer the policies as insurer of the business.

On December 30, 2021, the TL entered into a reinsurance agreement with Allianz Life Insurance Company of North America ("Allianz"). Pursuant to such agreement, the Company assumed 100% of a block of fixed indexed annuities ("FIA") and 5% of another block of FIAs on a coinsurance basis. Certain of the FIAs included living withdrawal benefits. The Company acquired general account assets to support the assumed reserves and paid $693 to Allianz upon closing, primarily relating to a ceding commission of $866, offset by cash settlements. Under the reinsurance agreement, the Company will participate in an aggregated hedging pool administered by Allianz, whereby the Company will pay Allianz a fee in order to participate in the pool and will receive an index credit payout based on the level of participation in the pool. An unearned revenue reserve ("URR") was recorded in other liabilities upon the effective date for approximately $25 and will be recognized in income over the expected life of the underlying policies. Allianz will continue to service and administer the policies as insurer of the business.

1. Basis of Presentation and Significant Accounting Policies (continued)

COVID-19 Update

The impact of the outbreak and continuing spread of the novel coronavirus ("COVID-19") and the related disruption to the worldwide economy continues to affect companies across all industries. For the period of July 1, 2021 to December 31, 2021, the COVID-19 pandemic did have varying impacts on components of revenue, however, there was no material impact on the Company's results of operations attributable to the COVID-19 pandemic. The duration and impact of the COVID-19 public health crisis on financial markets, overall economy and our operations remain uncertain, as is the efficacy of government and central bank interventions. As such, the Company continues to be unable to quantify its impact on the financial results and operations in future periods.

Consolidation

The Consolidated Financial Statements include the accounts of TR Re and entities the Company directly or indirectly has a controlling financial interest in which the Company is required to consolidate. Entities in which TR Re has significant influence over the operating and financing decisions but is not required to consolidate are reported using the equity method. All intercompany transactions and balances between TR Re and its subsidiaries have been eliminated.

Use of Estimates

The preparation of financial statements, in conformity with U.S. GAAP, requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ materially from those estimates.

The most significant estimates include:

- Valuation of investments, including the underlying investments within the funds withheld at interest;
- Evaluation of credit losses on fixed maturities, available for sale ("AFS");
- Allowance for credit losses ("ACL") on mortgage loans;
- Valuation of derivative assets and liabilities, including embedded derivatives;
- Valuation of liabilities associated with fixed indexed annuities ("FIAs").
- Determining estimated gross profits ("EGPs") used in the valuation and amortization of assets (including Value of Business Acquired ("VOBA") and liabilities associated with variable annuity, FIAs and other universal life-type contracts, as well as any deferred reinsurance amounts
- Valuation of living benefits required to be fair valued;
- Valuation allowance on deferred tax assets;
- Evaluation of goodwill and other intangible assets for impairment;
- Valuation of deferred acquisition costs ("DAC") and URR;
- Contingencies relating to corporate litigation and regulatory matters

Certain of these estimates are particularly sensitive to market conditions, and deterioration and/or volatility in the worldwide debt or equity markets and could have a material impact on the Consolidated Financial Statements. The ultimate extent to which the COVID-19 pandemic will directly impact the Company's business, results of operations and financial condition will depend on future developments that are highly uncertain.

1. Basis of Presentation and Significant Accounting Policies (continued)

Pushdown Accounting

The table below shows the main balance sheet line items impacted in pushdown accounting, as of July 1, 2021:

Cash and invested assets	$	19,711
VOBA		565
Deferred income taxes		737
Goodwill		97
Other intangible assets		67
Reinsurance recoverables and other assets		29,442
Separate account assets		112,857
Total assets		**163,476**
Reserves for future policy benefits		21,122
Other policyholder funds and benefits payable		25,961
Other liabilities		1,653
Separate account liabilities		112,857
Total liabilities		**161,593**
Equity		1,883
Total liabilities and stockholder's equity	**$**	**163,476**

The Company's assets and liabilities are recognized based on Sixth Street's accounting basis, with an offset to additional paid-in capital.

Invested Assets

In pushdown accounting, the acquired investments are recorded at fair value through adjustments to additional paid-in capital at the acquisition date.

Value of Business Acquired/Additional Reserves

In conjunction with the acquisition of the Company, a portion of the purchase price was allocated to the right to receive future gross profits from cash flows and earnings of the Company's insurance and investment contracts as of the date of the Sixth Street Acquisition. This intangible asset is called VOBA and is based on the actuarially estimated present value of future cash flows from the Company's insurance and investment contracts in-force as of the date of the transaction. The estimated fair value calculation of VOBA is based on certain assumptions, including mortality, persistency, expenses, discount rates, and other factors that the Company expects to experience in future years. Actual experience on the acquired contracts may vary from these projections and the recovery of VOBA is dependent upon the future profitability of the related business. The Company amortizes VOBA over estimated gross profits and it is reviewed for recoverability quarterly. The fair value of certain acquired obligations of the Company exceeded the book value of assumed in-force policy liabilities resulting in additional reserve liabilities. In pushdown accounting these liabilities were increased to fair value, which is presented separately from VOBA as additional insurance liability in reserves for future policy benefits and other policyholder funds and benefits payable. The additional liability is amortized to income over the policy or other relevant time period.

Goodwill

Goodwill represents the excess of the acquisition cost of an acquired business over the fair value of assets acquired and liabilities assumed. Goodwill is not amortized but is tested for impairment at the entity or reporting unit level annually or when events or circumstances arise, such as adverse changes in the business climate, that would more likely than not reduce the fair value of the entity or a reporting unit below its carrying value. Our methodology for conducting this goodwill impairment testing contains both a qualitative and quantitative assessment.

1. Basis of Presentation and Significant Accounting Policies (continued)

The Company has the option to initially perform an assessment of qualitative factors in order to determine whether it is more likely than not that the fair value of the entity or a reporting unit is less than its carrying amount. The qualitative factors may include, but are not limited to, economic conditions, industry and market considerations, cost factors, overall financial performance of the entity or a reporting unit and other company and entity-level or reporting unit-specific events. If it is determined that it is more likely than not that the fair value of the entity or reporting unit is less than its carrying amount, we then perform the impairment evaluation using a more detailed quantitative assessment. If the carrying values of the entity or reporting units were to exceed their fair value under that quantitative assessment, the amount of the impairment would be calculated and goodwill would be adjusted accordingly. The Company could directly perform this quantitative assessment, bypassing the qualitative assessment and perform a quantitative impairment test.

For a discussion of goodwill from the Sixth Street Acquisition, see Note 7 - Goodwill and Other Intangible Assets.

Other Intangible Assets

Intangible assets with definite lives are amortized over the estimated useful life of the asset. Amortizing intangible assets primarily consists of internally developed software amortized over a period not to exceed seven years. Intangible assets with indefinite lives, primarily insurance licenses, are not amortized but are reviewed annually in the Company's impairment analysis. They will be tested for impairment more frequently if events or circumstances indicate the fair value of indefinitely lived intangibles is less than the carrying value.

For a discussion of other intangible assets from the Sixth Street Acquisition, see Note 7 - Goodwill and Other Intangible Assets.

Future Adoption of New Accounting Standards

Accounting for Contract Assets and Contract Liabilities from Contracts with Customers

The Financial Accounting Standards Board ("FASB") issued ASU 2021-08 *Accounting for Contract Assets and Contract Liabilities from Contracts with Customers* in October 2021, which requires acquiring entities to apply *Topic 606, Revenue from Contracts with Customers* upon recognizing and measuring contract assets and liabilities in a business combination. This update is intended to improve comparability after a business combination, by providing consistent recognition and measurement of revenue contracts with customers acquired and not acquired in a business combination. ASU 2021-08 is effective for annual periods beginning after December 15, 2022 and interim periods within those annual periods, with early adoption permitted. The amendments in this ASU should be applied prospectively. We expect to adopt the provisions of this ASU in the first quarter of 2023 and do not expect it to have a material impact on the Company.

Targeted Improvements to the Accounting for Long Duration Contracts

The FASB issued ASU 2018-12 *Targeted Improvements to the Accounting for Long-Duration Contracts* ("ASU 2018-12") in August 2018, which impacts the existing recognition, measurement, presentation and disclosure requirements for certain long duration contracts issued by an insurance company. The guidance is intended to improve the timeliness of recognizing changes in the liability for future policy benefits ("LFPB"), by requiring annual or more frequent updates of insurance assumptions and modifying rates used to discount future cash flows. Further, the guidance seeks to improve the accounting for certain market-based options or guarantees associated with account balance contracts and improve the effectiveness of the required disclosures.

This guidance was amended through the issuance of ASU 2020-11, which deferred the effective date the Company is required to adopt the guidance to January 1, 2023, with early adoption permitted. The Company continues to assess its policies, processes, and applicable systems to determine the impact on the Company's operations and financial results. We are unable to reasonably estimate the expected impact of the new standard at this time due to the nature and extent of the required changes to a significant portion of the Company’s operations. This standard represents a significant change from existing U.S. GAAP; however, it does not change the underlying economics of the business or its related cash flows. The Company has a transition date, the date of the Sixth Street Acquisition, and expects to use the retrospective transition method. Additionally, the Company is reviewing the impact of its recent reinsurance transactions under the new standard.

As part of working toward implementation of the updated standard, the Company has made progress on key accounting policy decisions, including processes to identify insurance policy groupings for LFPB measurement, applicable discount rates, development of liability cash flow and claim expense assumptions, and VOBA amortization methodology. Long duration insurance contracts issued by the Company will be grouped into separate cohorts based on the product type and annual contract issue date.

1. Basis of Presentation and Significant Accounting Policies (continued)

Cash flow assumptions underlying insurance liabilities will be evaluated at least annually in the same fiscal quarter each year as to whether an update is needed. Under the new guidance, the Company will update the cash flow assumptions used to measure the liability for future policy benefits, for both changes in future assumptions and actual experience, at least annually using a retrospective update method with a cumulative catch-up adjustment recorded in a separate line item in net income. Cash flows are required to be discounted with an upper-medium grade (or low credit risk) fixed-income instrument yields, with the effect of discount rate changes on the liability recorded in OCI. The discount rate utilized is intended to reflect the duration characteristics of the corresponding insurance liabilities. The Company will obtain yield curves and spreads for a range of tenors to determine spot yields to discount the cash flows of the insurance liabilities as of each valuation date. This is a change from current U.S. GAAP which utilizes assumptions, including discount rates "locked in" at policy issuance and until such time significant changes in experience or assumptions may require the Company to establish premium deficiency reserves. When this occurs, premium deficiency reserves are recognized by unlocking reserve assumptions to eliminate a reserve deficiency under current U.S. GAAP.

The Company currently offers and assumes certain guarantees and product features on variable annuity and FIA products, which protect the contractholder from other-than-nominal capital market risk and expose the Company to other-than-nominal capital market risk. These MRB features are required to be measured at fair value with changes in fair value recorded in net income, with the exception of the changes in MRB liabilities attributable to a change in an entity's nonperformance risk, which is required to be recognized in OCI. For any assumed products, the portion of the change in MRBs attributable to changes in the reinsurer's nonperformance risk is recognized in income. The Company will maximize the use of relevant observable information and minimize the use of unobservable information in determining the balance of the MRBs upon adoption.

VOBA and other balances are expected to be amortized on a constant-level basis over the expected remaining term of the related contracts. As annuities do not have a face amount, the constant level basis used is expected to be based on the number of policies in-force. The constant level basis for FIA is expected to be based on the account value.

Additionally, ASU 2018-12 requires certain enhanced presentation and disclosures including disaggregated rollforwards for LFPB, policyholder account balances, MRBs, separate account liabilities, DAC, and information about significant inputs, judgments and methods used in the measurement.

Significant Accounting Policies

The Company’s significant accounting policies are as follows:

Segment Information

The Company has no reportable segments and its principal products and services are comprised of variable annuities, fixed and payout annuities, FIAs and private-placement life insurance. The Company's determination that it has no reportable segments is based on the fact that the Company's chief operating decision maker reviews the Company's financial performance at a consolidated level.

Revenue Recognition

For investment and universal life-type contracts, the amounts collected from policyholders are considered deposits and are not included in revenue. Fee income for variable annuity and other universal life-type contracts consists of policy charges for policy administration, cost of insurance charges and surrender charges assessed against policyholders’ account balances and are recognized in the period in which services are provided. For the Company’s traditional life products, premiums are recognized as revenue when due from policyholders.

Income Taxes

The Company recognizes taxes payable or refundable for the current year and deferred taxes for the tax consequences of temporary differences between the financial reporting and tax basis of assets and liabilities. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years the temporary differences are expected to reverse. A deferred tax provision is recorded for the tax effects of differences between the Company's current taxable income and its income before tax under U.S. GAAP in the Consolidated Statement of Operations. For deferred tax assets, the Company records a valuation allowance that is adequate to reduce the total deferred tax asset to an amount that will more likely than not be realized.

Investments

Overview

The Company’s investments in fixed maturities include bonds, structured securities, redeemable preferred stock and commercial paper. Most of these investments are classified as AFS and are carried at fair value, net of ACL, in accordance with guidance regarding expected credit losses. The after-tax difference between fair value and cost or amortized cost is

1. Basis of Presentation and Significant Accounting Policies (continued)

reflected in stockholder's equity as a component of AOCI, after adjustments for the effect of VOBA and reserve adjustments. Equity securities are measured at fair value with any changes in valuation reported in net income. Policy loans are carried at outstanding balance. Mortgage loans are recorded at the outstanding principal balance adjusted for amortization of premiums or discounts and net of ACL. Short-term investments are carried at amortized cost, which approximates fair value. Limited partnerships and other alternative investments are reported at their carrying value and are primarily accounted for under the equity method with the Company's share of earnings included in net investment income. Recognition of income related to limited partnerships and other alternative investments is delayed due to the availability of the related financial information, as private equity and other funds are generally on a three-month lag and hedge funds generally on a one-month lag. Accordingly, income for period of July 1, 2021 to December 31, 2021 may not include the full impact of current year changes in valuation of the underlying assets and liabilities of the funds, which are generally obtained from the limited partnerships and other alternative investments' general partners. Other investments consist of derivative instruments which are carried at fair value and real estate acquired in satisfaction of debt.

Credit Losses

An ACL is recognized as an estimate of credit losses expected over the life of financial instruments, such as mortgage loans, reinsurance recoverables and off-balance sheet credit exposures that the Company cannot unconditionally cancel. The measurement of the expected credit loss estimate is based on historical loss data, current conditions, and reasonable and supportable forecasts.

Credit losses on fixed maturities, AFS carried at fair value are measured through an other-than-temporary impairment ("OTTI"); however, losses are recognized through the ACL and no longer as an adjustment to the amortized cost. Recoveries of OTTI on fixed maturities, AFS are recognized as reversals of the ACL recognized through net realized capital gains and losses and no longer accreted as net investment income through an adjustment to the investment yield. Additionally, purchased financial assets with a more-than-insignificant amount of credit deterioration since original issuance establishes an ACL at acquisition, which is recorded with the purchase price to establish the initial amortized cost of the investment.

Net Realized Capital Gains and Losses

Net realized capital gains and losses from investment sales are reported as a component of revenues and are determined on a specific identification basis. Net realized capital gains and losses also result from fair value changes in equity securities and derivatives contracts (both freestanding and embedded) that do not qualify, or are not designated, as a hedge for accounting purposes. Impairments and changes in the ACL on fixed maturities, AFS; mortgage loans; and reinsurance recoverables are recognized as net realized capital losses in accordance with the Company's impairment and ACL policies as discussed in Note 3 - Investments of Notes to Consolidated Financial Statements. Foreign currency transaction remeasurements are also included in net realized capital gains and losses.

Net Investment Income

Interest income from fixed maturities, AFS and mortgage loans is recognized when earned on the constant effective yield method based on estimated timing of cash flows. The amortization of premium and accretion of discount for fixed maturities also takes into consideration call and maturity dates that produce the lowest yield. For securitized financial assets subject to prepayment risk, yields are recalculated and adjusted periodically to reflect historical and/or estimated future prepayments using the retrospective method; however, if these investments have previously recognized an ACL and for certain other asset-backed securities, any yield adjustments are made using the prospective method. Prepayment fees and make-whole payments on fixed maturities and mortgage loans are recorded in net investment income when earned. For equity securities, dividends are recognized as investment income on the ex-dividend date. Limited partnerships and other alternative investments primarily use the equity method of accounting to recognize the Company's share of earnings. In accordance with accounting guidance regarding expected credit losses, such losses are recognized through an ACL. The Company's non-income producing investments were not material for the period of July 1, 2021 to December 31, 2021.

Derivative Instruments

Overview

The Company utilizes a variety of over-the-counter ("OTC") transactions cleared through central clearing houses ("OTC-cleared") and exchange traded derivative instruments as part of its overall risk management strategy as well as to enter into replication transactions. The types of instruments may include swaps, caps, floors, forwards, futures and options to achieve one of four Company-approved objectives:

- to hedge risk arising from interest rate, equity market, commodity market, credit spread and issuer default, price or currency exchange rate risk or volatility;

1. Basis of Presentation and Significant Accounting Policies (continued)

- to manage liquidity;
- to control transaction costs;
- to enter into synthetic replication transactions.

Interest rate and credit default swaps involve the periodic exchange of cash flows with other parties, at specified intervals, calculated using agreed upon rates or other financial variables and notional principal amounts. Generally, little to no cash or principal payments are exchanged at the inception of the contract. Typically, at the time a swap is entered into, the cash flow streams exchanged by the counterparties are equal in value.

Interest rate cap and floor contracts entitle the purchaser to receive from the issuer at specified dates, the amount, if any, by which a specified market rate exceeds the cap strike interest rate or falls below the floor strike interest rate, applied to a notional principal amount. A premium payment determined at inception is made by the purchaser of the contract and no principal payments are exchanged.

Forward contracts are customized commitments that specify a rate of interest or currency exchange rate to be paid or received on an obligation beginning on a future start date and are typically settled in cash.

Financial futures are standardized commitments to either purchase or sell designated financial instruments, at a future date, for a specified price and may be settled in cash or through delivery of the underlying instrument. Futures contracts trade on organized exchanges. Margin requirements for futures are met by pledging securities or cash, and changes in the futures' contract values are settled daily in cash.

Option contracts grant the purchaser, for a premium payment, the right to either purchase from or sell to the issuer a financial instrument at a specified price, within a specified period or on a stated date. The contracts may reference commodities, which grant the purchaser the right to either purchase from or sell to the issuer commodities at a specified price, within a specified period or on a stated date. Option contracts are typically settled in cash.

Foreign currency swaps exchange an initial principal amount in two currencies, agreeing to re-exchange the currencies at a future date, at an agreed upon exchange rate. There may also be a periodic exchange of payments at specified intervals calculated using the agreed upon rates and exchanged principal amounts.

The Company's derivative transactions conducted in insurance company subsidiaries are used in strategies permitted under the derivative use plans required by the State of Connecticut and the State of New York insurance departments.

Accounting and Financial Statement Presentation of Derivative Instruments and Hedging Activities

Derivative instruments are recognized on the Consolidated Balance Sheet at fair value and are reported in other investments and other liabilities. For balance sheet presentation purposes, the Company has elected to offset the fair value amounts, income accruals, and related cash collateral receivables and payables of OTC derivative instruments executed in a legal entity and with the same counterparty or under a master netting agreement, which provides the Company with the legal right of offset.

The Company clears certain interest rate swap and credit default swap derivative transactions through central clearing houses. OTC-cleared derivatives require initial collateral at the inception of the trade in the form of cash or highly liquid securities, such as U.S. Treasuries and government agency investments. Central clearing houses also require additional cash as variation margin based on daily market value movements. For information on collateral, see the derivative collateral arrangements section in Note 4 - Derivatives of Notes to Consolidated Financial Statements. In addition, OTC-cleared transactions include price alignment amounts either received or paid on the variation margin, which are reflected in realized capital gains and losses or, if characterized as interest, in net investment income.

On the date the derivative contract is entered into, the Company designates the derivative as (1) a hedge of the variability in cash flows of a forecasted transaction or of amounts to be received or paid related to a recognized asset or liability ("cash flow" hedge), (2) a hedge of a net investment in a foreign operation ("net investment" hedge) or (3) held for other investment and/or risk management purposes, which primarily involve managing asset or liability related risks and do not qualify for hedge accounting.

Cash Flow Hedges - Changes in the fair value of a derivative that is designated and qualifies as a cash flow hedge, including foreign-currency cash flow hedges, are recorded in AOCI and are reclassified into earnings when the variability of the cash flow of the hedged item impacts earnings. Gains and losses on derivative contracts that are reclassified from AOCI to current period earnings are included in the line item in the Consolidated Statement of Operations in which the cash flows of the hedged item are recorded. Periodic derivative net coupon settlements are recorded in the line item of the Consolidated Statement of Operations in which the cash flows of the hedged item are recorded. Cash flows from cash flow

1. Basis of Presentation and Significant Accounting Policies (continued)

hedges are presented in the same category as the cash flows from the items being hedged on the Consolidated Statement of Cash Flows.

Other Investment and/or Risk Management Activities - The Company's other investment and/or risk management activities primarily relate to strategies used to reduce economic risk or replicate permitted investments and do not receive hedge accounting treatment. Changes in the fair value, including periodic derivative net coupon settlements, of derivative instruments held for other investment and/or risk management purposes are reported in current period earnings as net realized capital gains and losses.

Hedge Documentation and Effectiveness Testing

To qualify for hedge accounting treatment, a derivative must be highly effective in mitigating the designated changes in fair value or cash flow of the hedged item. At hedge inception, the Company formally documents all relationships between hedging instruments and hedged items, as well as its risk-management objective and strategy for undertaking each hedge transaction. The documentation process includes linking derivatives that are designated as fair value, cash flow, or net investment hedges to specific assets or liabilities on the balance sheet or to specific forecasted transactions and defining the effectiveness testing methods to be used. The Company also formally assesses both at the hedge's inception and ongoing on a quarterly basis, whether the derivatives that are used in hedging transactions have been and are expected to continue to be highly effective in offsetting changes in fair values, cash flows or net investment in foreign operations of hedged items. Hedge effectiveness is assessed primarily using quantitative methods as well as using qualitative methods. Quantitative methods include regression or other statistical analysis of changes in fair value or cash flows associated with the hedge relationship. Qualitative methods may include comparison of critical terms of the derivative to the hedged item.

Discontinuance of Hedge Accounting

The Company discontinues hedge accounting prospectively when (1) it is determined that the qualifying criteria are no longer met; (2) the derivative is no longer designated as a hedging instrument; or (3) the derivative expires or is sold, terminated or exercised.

When cash flow hedge accounting is discontinued because the Company becomes aware that it is not probable that the forecasted transaction will occur, the derivative continues to be carried on the balance sheet at its fair value, and gains and losses that were accumulated in AOCI are recognized immediately in earnings.

In other situations in which hedge accounting is discontinued, including those where the derivative is sold, terminated or exercised, amounts previously deferred in AOCI are reclassified into earnings when earnings are impacted by the hedged item.

Embedded Derivatives

The Company purchases investments and has previously issued and assumed via reinsurance financial products that contain embedded derivative instruments. When it is determined that (1) the embedded derivative possesses economic characteristics that are not clearly and closely related to the economic characteristics of the host contract and (2) a separate instrument with the same terms would qualify as a derivative instrument, the embedded derivative is bifurcated from the host for measurement purposes. The embedded derivative, which is reported with the host instrument on the Consolidated Balance Sheet, is carried at fair value with changes in fair value reported in net realized capital gains and losses.

Credit Risk

Credit risk is defined as the risk of financial loss due to uncertainty of an obligor's or counterparty's ability or willingness to meet its obligations in accordance with agreed upon terms. Credit exposures are measured using the market value of the derivatives, resulting in amounts owed to the Company by its counterparties or potential payment obligations from the Company to its counterparties. The Company generally requires that OTC derivative contracts, other than certain forward contracts, be governed by International Swaps and Derivatives Association ("ISDA") agreements which are structured by legal entity and by counterparty, and permit right of offset. Some agreements require daily collateral settlement based upon agreed upon thresholds. For purposes of daily derivative collateral maintenance, credit exposures are generally quantified based on the prior business day's market value and collateral is pledged to and held by, or on behalf of, the Company to the extent the current value of the derivatives exceed the contractual thresholds. For the Company's domestic derivative programs, the maximum uncollateralized threshold for a derivative counterparty for a single legal entity is $10. The Company also minimizes the credit risk of derivative instruments by entering into transactions with high quality counterparties primarily rated A or better, which are monitored and evaluated by the Company's risk management team and reviewed by senior management. OTC-cleared derivatives are governed by clearing house rules. Transactions cleared through a central clearing house reduce risk due to their ability to require daily variation margin and act as an independent

1. Basis of Presentation and Significant Accounting Policies (continued)

valuation source. In addition, the Company monitors counterparty credit exposure on a monthly basis to ensure compliance with Company policies and statutory limitations.

Cash

Cash represents cash on hand and demand deposits with banks or other financial institutions.

Reinsurance

The Company cedes insurance to unaffiliated insurers to enable the Company to manage capital and risk exposure. In ceding risks, the Company uses yearly renewable term, coinsurance and modified coinsurance arrangements and variation thereof. Failure of reinsurers to honor their obligations could result in losses to the Company.

Certain of the Company's ceded reinsurance arrangements are on a modified coinsurance basis. Under modified coinsurance arrangements, both the ceded reserves and the investment assets that support the reserves are retained by the cedant and profit and loss with respect to the obligations and investment returns flow through periodic net settlements. Modified coinsurance arrangements require the cedant to establish segregated accounts in which the assets supporting the ceded obligations are maintained. A funds withheld liability is established which represents the fair value of investment assets segregated under modified coinsurance reinsurance arrangements.

The funds withheld liability is comprised of a host contract and an embedded derivative. For ceded reinsurance agreements, the cedant has an obligation to pay the total return on the assets supporting the funds withheld liability. Interest accrues at a risk-free rate on the host contract and is recorded as net investment income in the Consolidated Statement of Operations. The embedded derivative is similar to a total return swap on the income generated by the underlying assets held by the cedant. The change in the embedded derivative is recorded in net realized capital gains (losses).

The Company also cedes to and assumes from other insurers on coinsurance arrangements. Under coinsurance arrangements, reserves and investment assets are transferred from the ceding insurer to the reinsurer. In certain arrangements, the reinsurer will hold the assets supporting the reserves in a trust for the benefit of the ceding insurer.

Reinsurance accounting is followed for ceded and assumed transactions that provide indemnification against loss or liability relating to insurance risk (i.e., risk transfer). To meet risk transfer requirements, a reinsurance agreement must include insurance risk, consisting of underwriting, investment, and timing risk, and a reasonable possibility of a significant loss to the reinsurer. If the ceded and assumed transactions do not meet risk transfer requirements, the Company accounts for these transactions as financing transactions. The DAC or URR related to long-duration contracts is accounted for over the life of the underlying reinsured policies using assumptions consistent with those used to account for the underlying policies. We generally have the right of offset on reinsurance contracts, but have elected to present balances due to and due from reinsurance counterparties on a gross basis on the financial statements.

Premiums, benefits, losses and loss adjustment expenses reflect the net effects of ceded and assumed reinsurance transactions. Included in other assets are prepaid reinsurance premiums, which represent the portion of premiums ceded to reinsurers applicable to the unexpired terms of the reinsurance agreements. Included in reinsurance recoverables are balances due from reinsurance companies for paid and unpaid losses and loss adjustment expenses and are presented net of an ACL which is based on the expectation of lifetime credit loss.

The Company evaluates the financial condition of its reinsurers and concentrations of credit risk. Reinsurance is placed with reinsurers that meet strict financial criteria established by the Company.

Value of Business Acquired

VOBA represents the estimated value assigned to the right to receive future gross profits from cash flows and earnings of acquired insurance and investment contracts as of the date of the transaction. It is based on the actuarially estimated present value of future cash flows from the acquired insurance and investment contracts in-force as of the date of the transaction. The principal assumptions used in estimating VOBA include equity market returns, mortality, persistency, expenses, and discount rates, in addition to other factors that the Company expects to experience in future years. Actual experience on the acquired contracts may vary from these projections and the recovery of VOBA is dependent upon the future profitability of the related business. The Company amortizes VOBA over EGPs and it is reviewed for recoverability quarterly.

The Company also uses the present value of EGPs to determine reserves for universal life type contracts (including variable annuities) with death or other insurance benefits such as guaranteed minimum death benefits, life-contingent guaranteed minimum withdrawal and universal life insurance secondary guarantee benefits. These benefits are accounted for and collectively referred to as death and other insurance benefit reserves and are held in addition to the account value liability representing policyholder funds.

1. Basis of Presentation and Significant Accounting Policies (continued)

For most life insurance product contracts, including variable annuities, the Company estimates gross profits over 20 years as EGPs emerging subsequent to that time frame are immaterial. Future gross profits are projected over the estimated lives of the underlying contracts, based on future account value projections for variable annuity products. The projection of future account values requires th4e use of certain assumptions including: separate account returns; separate account fund mix; fees assessed against the contract holder's account balance; full and partial surrender rates; interest credited; mortality; and annuitization rates. Changes in these assumptions and changes to other assumptions such as expenses and hedging costs cause EGPs to fluctuate, which impacts earnings.

In the third quarter of 2021, the Company completed a comprehensive policyholder behavior assumption study which resulted in a non-market related after-tax charge and incorporated the results of that study into its projection of future gross profits. Additionally, throughout the year, the Company evaluates various aspects of policyholder behavior and will revise its policyholder behavior assumptions if credible emerging data indicates that changes are warranted. Upon completion of an annual assumption study or evaluation of credible new information, the Company will revise its assumptions to reflect its current best estimate. These assumption revisions will change the projected account values and the related EGPs in the VOBA models, as well as EGPs used in the death and other insurance benefit reserving models.

All assumption changes that affect the estimate of future EGPs including the update of current account values and policyholder behavior assumptions are considered an Unlock in the period of revision. An Unlock adjusts the VOBA, death and other insurance benefit reserve balances on the Consolidated Balance Sheet with an offsetting benefit or charge on the Consolidated Statement of Operations in the period of the revision. An Unlock revises EGPs to reflect the Company's current best estimate assumptions. The Company also tests the aggregate recoverability of VOBA by comparing the existing balance to the present value of future EGPs. An Unlock that results in an after-tax benefit generally occurs as a result of actual experience or future expectations of product profitability being favorable compared to previous estimates. An Unlock that results in an after-tax charge generally occurs as a result of actual experience or future expectations of product profitability being unfavorable compared to previous estimates.

Policyholders or their beneficiaries may make modifications to existing contracts. If the new modification results in a substantially changed replacement contract, the existing VOBA is written off through income. If the modified contract is not substantially changed, the existing VOBA continues to be amortized and incremental costs are expensed in the period incurred.

Reserve for Future Policy Benefits

Reserve for Future Policy Benefits on Universal Life-type Contracts

Certain contracts classified as universal life-type include death and other insurance benefit features. These features include guaranteed minimum death benefit ("GMDB") and the life-contingent portion of guaranteed minimum withdrawal benefit ("GMWB") riders offered with variable annuity contracts, secondary guarantee benefits offered with universal life insurance contracts, as well as GLWB riders and guaranteed annuitization benefits offered by assumed FIA contracts. GMDB riders on variable annuities provide a death benefit during the accumulation phase that is generally equal to the greater of (a) the contract value at death or (b) premium payments less any prior withdrawals and may include adjustments that increase the benefit, such as for maximum anniversary value ("MAV"). For the Company's products with life-contingent GMWB riders, the withdrawal benefit can exceed the guaranteed remaining balance ("GRB"), which is generally equal to premiums less withdrawals. In addition to recording an account value liability that represents policyholder funds, the Company records a death and other insurance benefit liability for GMDBs, the life-contingent portion of GMWBs and the universal life insurance secondary guarantees. Universal life insurance secondary guarantee benefits ensure that the policy will not terminate, and will continue to provide a death benefit, even if there is insufficient policy value to cover the monthly deductions and charges. GLWBs on FIA contracts allow guaranteed lifetime withdrawals even if account value is otherwise insufficient. Certain FIA contracts contain a second notional account value which provides additional annuitization benefits. This death and other insurance benefit liability is reported in reserve for future policy benefits on the Company's Consolidated Balance Sheet. Changes in the death and other insurance benefit reserves are recorded in benefits, losses and loss adjustment expenses in the Company's Consolidated Statement of Operations.

1. Basis of Presentation and Significant Accounting Policies (continued)

The death and other insurance benefit liability is determined by estimating the expected present value of the benefits in excess of the policyholder's expected account value in proportion to the present value of total expected assessments and investment margin. Total expected assessments are the aggregate of all contract charges, including those for administration, mortality, expense, and surrender. The liability is accrued as actual assessments are earned. The expected present value of benefits and assessments are generally derived from a set of stochastic scenarios that have been calibrated to assumed market rates of return and assumptions including volatility, discount rates, lapse rates and mortality experience. Consistent with the Company's policy on the Unlock, the Company regularly evaluates estimates used and adjusts the liability, with a related charge or credit to benefits, losses and loss adjustment expenses. For further information on the Unlock, see the Value of Business Acquired accounting policy section within this footnote.

The Company reinsures a portion of its in-force GMDB and GMWB, and all of its universal life insurance secondary guarantees.

Reserve for Future Policy Benefits on Traditional Annuity and Other Contracts

Traditional annuities recorded within the reserve for future policy benefits primarily include life-contingent contracts in the payout phase such as structured settlements and terminal funding agreements. Other contracts within the reserve for policyholder benefits include whole life and guaranteed term life insurance contracts. The reserve for future policy benefits is calculated using standard actuarial methods considering the present value of future benefits and related expenses to be paid less the present value of the portion of future premiums required using assumptions "locked in" at the time the policies were issued, including discount rate, withdrawal, mortality and expense assumptions deemed appropriate at the issue date. Future policy benefits are computed at amounts that, with additions from any estimated premiums to be received and with interest on such reserves compounded annually at assumed rates, are expected to be sufficient to meet the Company's policy obligations at their maturities or in the event of an insured's death. While assumptions are locked in upon issuance of new contracts and annuitizations of existing contracts, significant changes in experience or assumptions may require the Company to establish premium deficiency reserves. Premium deficiency reserves, if any, are established based on current assumptions without considering a provision for adverse deviation. Changes in or deviations from the assumptions used can significantly affect the Company's reserve levels and results from operations.

The Company uses reinsurance for a portion of its fixed and payout annuity businesses and its life insurance business.

Other Policyholder Funds and Benefits Payable

Other policyholder funds and benefits payable primarily include the non-variable account values associated with variable annuity, assumed FIA and other universal life-type contracts, investment contracts, assumed FIAs and the non-life contingent portion of variable annuity GMWBs that are accounted for as embedded derivatives at fair value as well as other policyholder account balances associated with our life insurance businesses and assumed reinsurance. Investment contracts are non-life contingent and include institutional and governmental deposits, structured settlements and fixed annuities. The liability for investment contracts is equal to the balance that accrues to the benefit of the contract holder as of the financial statement date, which includes the accumulation of deposits plus credited interest, less withdrawals, payments and assessments through the financial statement date. For discussion of fair value of GMWBs and assumed FIAs that represent embedded derivatives, see Note 2 - Fair Value Measurements of Notes to Consolidated Financial Statements.

Separate Account Liabilities

The Company records the variable account value portion of variable annuities, variable life insurance products and individual, institutional, and governmental investment contracts within separate accounts. Separate account assets are reported at fair value and separate account liabilities are reported at amounts consistent with separate account assets. Investment income and gains and losses from those separate account assets accrue directly to the policyholder, who assumes the related investment risk, and are offset by change in the related liability. The Company earns fee income for investment management, certain administrative services and mortality and expense risks.

2. Fair Value Measurements

The Company carries certain financial assets and liabilities at estimated fair value. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in the principal or most advantageous market in an orderly transaction between market participants. Our fair value framework includes a hierarchy that gives the highest priority to the use of quoted prices in active markets, followed by the use of market observable inputs, followed by the use of unobservable inputs. The fair value hierarchy levels are as follows:

Level 1 Fair values based primarily on unadjusted quoted prices for identical assets, or liabilities, in active markets that the Company has the ability to access at the measurement date.

Level 2 Fair values primarily based on observable inputs, other than quoted prices included in Level 1, or based on prices for similar assets and liabilities.

Level 3 Fair values derived when one or more of the significant inputs are unobservable (including assumptions about risk). With little or no observable market, the determination of fair values uses considerable judgment and represents the Company's best estimate of an amount that could be realized in a market exchange for the asset or liability. Also included are securities that are traded within illiquid markets and/or priced by independent brokers.

The Company will classify the financial asset or liability by level based upon the lowest level input that is significant to the determination of the fair value. In most cases, both observable inputs (e.g., changes in interest rates) and unobservable inputs (e.g., changes in risk assumptions) are used to determine fair values that the Company has classified within Level 3.

2. Fair Value Measurements (continued)

Assets and (Liabilities) Carried at Fair Value by Hierarchy Level as of December 31, 2021

	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Assets Accounted for at Fair Value on a Recurring Basis				
Fixed maturities, AFS				
Asset backed securities ("ABS")	$ 258	$ —	$ 258	$ —

Total liabilities accounted for at fair value on a recurring basis	**$ (812)**	**$ —**	**$ (19)**	**$ (793)**

[1] Includes derivative instruments in a net positive fair value position after consideration of the accrued interest and impact of collateral posting requirements which may be imposed by agreements and applicable law. See footnote 3 to this table for derivative liabilities.

[2] Approximately $1.6 billion of investment sales receivables, as of December 31, 2021, are excluded from this disclosure requirement because they are trade receivables in the ordinary course of business where the carrying amount approximates fair value. Included in the total fair value amount are $404 of investments, as of December 31, 2021, for which the fair value is estimated using the net asset value per unit as a practical expedient which is excluded from the disclosure requirement to classify amounts in the fair value hierarchy.

[3] Includes derivative instruments in a net negative fair value position (derivative liability) after consideration of the accrued interest and impact of collateral posting requirements which may be imposed by agreements and applicable law.

2. Fair Value Measurements (continued)

Fixed Maturities, Equity Securities, Short-term Investments, and Free-standing Derivatives

Valuation Techniques

The Company generally determines fair values using valuation techniques that use prices, rates, and other relevant information evident from market transactions involving identical or similar instruments. Valuation techniques also include, where appropriate, estimates of future cash flows that are converted into a single discounted amount using current market expectations. The Company uses a "waterfall" approach comprised of the following pricing sources and techniques, which are listed in priority order:

- Quoted prices, unadjusted, for identical assets or liabilities in active markets, which are classified as Level 1.
- Prices from third-party pricing services, which primarily utilize a combination of techniques. These services utilize recently reported trades of identical, similar, or benchmark securities making adjustments for market observable inputs available through the reporting date. If there are no recently reported trades, they may use a discounted cash flow technique to develop a price using expected cash flows based upon the anticipated future performance of the underlying collateral discounted at an estimated market rate. Both techniques develop prices that consider the time value of future cash flows and provide a margin for risk, including liquidity and credit risk. Most prices provided by third-party pricing services are classified as Level 2 because the inputs used in pricing the securities are observable. However, some securities that are less liquid or trade less actively are classified as Level 3. Additionally, certain long-dated securities, such as municipal securities and bank loans, include benchmark interest rate or credit spread assumptions that are not observable in the marketplace and are thus classified as Level 3.
- Internal matrix pricing is a valuation process internally developed for private placement securities for which the Company is unable to obtain a price from a third-party pricing service. Internal pricing matrices determine credit spreads that, when combined with risk-free rates, are applied to contractual cash flows to develop a price. The Company develops credit spreads using market based data for public securities adjusted for credit spread differentials between public and private securities, which are obtained from a survey of multiple private placement brokers. The market-based reference credit spread considers the issuer's sector, financial strength, and term to maturity, using an independent public security index, while the credit spread differential considers the non-public nature of the security. Securities priced using internal matrix pricing are classified as Level 2 because the significant inputs are observable or can be corroborated with observable data.
- Independent broker quotes, which are typically non-binding use inputs that can be difficult to corroborate with observable market based data. Brokers may use present value techniques using assumptions specific to the security types, or they may use recent transactions of similar securities. Due to the lack of transparency in the process that brokers use to develop prices, valuations that are based on independent broker quotes are classified as Level 3.

The fair value of freestanding derivative instruments is determined primarily using a discounted cash flow model or option model technique and incorporates counterparty credit risk. In some cases, quoted market prices for exchange-traded and OTC cleared derivatives may be used and in other cases independent broker quotes may be used. The pricing valuation models primarily use inputs that are observable in the market or can be corroborated by observable market data. The valuation of certain derivatives may include significant inputs that are unobservable, such as volatility levels, and reflect the Company's view of what other market participants would use when pricing such instruments. Unobservable market data is used in the valuation of customized derivatives that are used to hedge certain GMWB variable annuity riders. See the section "GMWB and FIA Embedded, Customized, and Reinsurance Derivatives" below for further discussion of the valuation model used to value these customized derivatives.

Valuation Inputs

Quoted prices for identical assets in active markets are considered Level 1 and consist of on-the-run U.S. Treasuries, money market funds, exchange-traded equity securities, open-ended mutual funds, certain short-term investments, and exchange traded futures and option contracts.

2. Fair Value Measurements (continued)

Valuation Inputs Used in Levels 2 and 3 Measurements for Securities and Freestanding Derivatives

Level 2 Primary Observable Inputs	Level 3 Primary Unobservable Inputs
Fixed Maturity Investments	
Structured securities (includes ABS, CLOs, CMBS and RMBS)	
• Benchmark yields and spreads • Monthly payment information • Collateral performance, which varies by vintage year and includes delinquency rates, loss severity rates and refinancing assumptions • Credit default swap indices Other inputs for ABS, CLOs, and RMBS: • Estimate of future principal prepayments, derived from the characteristics of the underlying structure • Prepayment speeds previously experienced at the interest rate levels projected for the collateral	• Independent broker quotes • Credit spreads beyond observable curve • Interest rates beyond observable curve Other inputs for less liquid securities or those that trade less actively, including subprime RMBS: • Estimated cash flows • Credit spreads, which include illiquidity premium • Constant prepayment rates • Constant default rates • Loss severity
Corporates	
• Benchmark yields and spreads • Reported trades, bids, offers of the same or similar securities • Issuer spreads and credit default swap curves Other inputs for investment grade privately placed securities that utilize internal matrix pricing: • Credit spreads for public securities of similar quality, maturity, and sector, adjusted for non-public nature	• Independent broker quotes • Credit spreads beyond observable curve • Interest rates beyond observable curve Other inputs for below investment grade privately placed securities and private bank loans: • Credit spreads for public securities of similar quality, maturity, and sector, adjusted for non-public nature
U.S Treasuries, Municipals, and Foreign government/government agencies	
• Benchmark yields and spreads • Issuer credit default swap curves • Political events in emerging market economies • Municipal Securities Rulemaking Board reported trades and material event notices • Issuer financial statements	• Credit spreads beyond observable curve • Interest rates beyond observable curve
Equity Securities	
• Quoted prices in markets that are not active	• For privately traded equity securities, internal discounted cash flow models utilizing earnings multiples or other cash flow assumptions that are not observable
Short-term Investments	
• Benchmark yields and spreads • Reported trades, bids, offers • Issuer spreads and credit default swap curves • Material event notices and new issue money market rates	• Independent broker quotes
Derivatives	
Credit derivatives	
• Swap yield curve • Credit default swap curves	Not applicable
Equity derivatives	
• Equity index levels • Swap yield curve	• Independent broker quotes • Equity volatility
Foreign exchange derivatives	
• Swap yield curve • Currency spot and forward rates • Cross currency basis curves	Not applicable
Interest rate derivatives	
• Swap yield curve	• Independent broker quotes • Interest rate volatility • Swap curve beyond 30 years

2. Fair Value Measurements (continued)

Significant Unobservable Inputs for Level 3 - Securities

As of December 31, 2021							
Assets Accounted for at Fair Value on a Recurring Basis	**Fair Value**	**Predominant Valuation Technique**	**Significant Unobservable Input**	**Minimum**	**Maximum**	**Weighted Average [1]**	**Impact of Increase in Input on Fair Value [2]**
CLOs [3]	$ 159	Discounted cash flows	Spread	234bps	258bps	257bps	Decrease
CMBS [3]	276	Discounted cash flows	Spread (encompasses prepayment, default risk and loss severity)	203bps	637bps	303bps	Decrease
Corporate [4]	623	Discounted cash flows	Spread	125bps	1,227bps	278bps	Decrease
RMBS [3]	65	Discounted cash flows	Spread [6]	39bps	229bps	90bps	Decrease
			Constant prepayment rate [6]	4%	16%	8%	Decrease [5]
			Constant default rate [6]	1%	4%	3%	Decrease
			Loss severity [6]	—%	100%	64%	Decrease

[1] The weighted average is determined based on the fair value of the securities.
[2] Conversely, the impact of a decrease in input would have the opposite impact to the fair value as that presented in the table.
[3] Excludes securities for which the Company bases fair value on broker quotations.
[4] Excludes securities for which the Company bases fair value on broker quotations; however, included are broker-priced lower-rated private placement securities for which the Company receives spread and yield information to corroborate the fair value.
[5] Decrease for above market rate coupons and increase for below market rate coupons.
[6] Generally, a change in the assumption used for the constant default rate would have been accompanied by a directionally similar change in the assumption used for the loss severity and a directionally opposite change in the assumption used for constant prepayment rate and would have resulted in wider spreads.

The tables below exclude certain securities for which fair values are predominately based on independent broker quotes.

Significant Unobservable Inputs for Level 3 - Freestanding Derivatives

As of December 31, 2021							
	Fair Value	**Predominant Valuation Technique**	**Significant Unobservable Input**	**Minimum**	**Maximum**	**Weighted Average [1]**	**Impact of Increase in Input on Fair Value [2]**
Interest rate derivatives							
Interest rate swaps	$ 3	Discounted cash flows	Swap curve beyond 30 years	2%	2%	2%	Decrease
Interest rate swaption	(3)	Option model	Interest rate volatility	1%	1%	1%	Increase
Macro hedge program [3] [4]							
Equity options	(195)	Option model	Equity volatility	17%	63%	28%	Increase
Interest rate swaption	7	Option model	Interest rate volatility	1%	1%	1%	Increase

[1] The weighted average is determined based on the fair value of the securities.
[2] Conversely, the impact of a decrease in input would have the opposite impact to the fair value as that presented in the table. Changes are based on long positions, unless otherwise noted. Changes in fair value will be inversely impacted for short positions.
[3] Excludes derivatives for which the Company bases fair value on broker quotations.
[4] Includes activity previously reported as GMWB hedging instruments. For further discussion please refer to the section GMWB Derivatives, net in Note 4 - Derivatives of Notes to Consolidated Financial Statements.

GMWB and FIA Embedded, Customized and Reinsurance Derivatives

GMWB Embedded Derivatives	The Company formerly offered certain variable annuity products with GMWB riders that provide the policyholder with a GRB which is generally equal to premiums less withdrawals. If the policyholder's account value is reduced to a specified level through a combination of market declines and withdrawals but the GRB still has value, the Company is obligated to continue to make annuity payments to the policyholder until the GRB is exhausted. When payments of the GRB are not life-contingent, the GMWB represents an embedded derivative carried at fair value reported in other policyholder funds and benefits payable on the Consolidated Balance Sheet with changes in fair value reported in net realized capital gains and losses.

2. Fair Value Measurements (continued)

FIA Embedded Derivative	The Company assumed through reinsurance FIA contracts that provide the policyholder with benefits that depend on the performance of market indices. Benefits in excess of contract guarantees represent an embedded derivative carried at fair value and reported in other policyholder funds and benefits payable on the Consolidated Balance Sheet with changes in fair value reported in net realized capital gains (losses).
Freestanding Customized Derivatives	The Company previously held freestanding customized derivative contracts to provide protection from certain capital markets risks for the remaining term of specified blocks of GMWB riders written on a direct basis. These customized derivatives are based on policyholder behavior assumptions specified at the inception of the derivative contracts. The Company retained the risk for differences between assumed and actual policyholder behavior and between the performance of the actively managed funds underlying the separate accounts and their respective indices. These derivatives were reported on the Consolidated Balance Sheet within other investments or other liabilities, as appropriate, after considering the impact of master netting agreements.
GMWB Reinsurance Derivative	The Company has reinsurance arrangements with unaffiliated reinsurers in place to transfer a portion of its risk of loss due to GMWB. These arrangements are recognized as derivatives carried at fair value and reported in reinsurance recoverables on the Consolidated Balance Sheet. Changes in the fair value of the reinsurance agreements are reported in net realized capital gains and losses.

Valuation Techniques

Fair values for FIA and GMWB embedded derivatives, freestanding customized derivatives and reinsurance derivatives are classified as Level 3 in the fair value hierarchy and are calculated using internally developed models that utilize significant unobservable inputs because active, observable markets do not exist for these items. In valuing the GMWB embedded derivative, the Company attributes to the derivative a portion of the expected fees to be collected over the expected life of the contract from the contract holder equal to the present value of future GMWB claims. The excess of fees collected from the contract holder in the current period over the portion of fees attributed to the embedded derivative in the current period are associated with the host variable annuity contract and reported in fee income.

Valuation Inputs

The fair value for each of the non-life contingent GMWBs, FIA embedded derivative, the freestanding customized derivatives and the GMWB reinsurance derivative is calculated as an aggregation of the following components: Best Estimate Benefits; Credit Standing Adjustment; and Margins. The Company believes the aggregation of these components results in an amount that a market participant in an active liquid market would require, if such a market existed, to assume the risks associated with the guaranteed minimum benefits and the related reinsurance and customized derivatives. Each component described in the following discussion is unobservable in the marketplace and requires subjectivity by the Company in determining its value.

Best Estimate Benefits

The Best Estimate Benefits are calculated based on actuarial and capital market assumptions related to projected cash flows, including the present value of benefits and related contract charges, over the lives of the contracts, incorporating unobservable inputs including expectations concerning policyholder behavior.

Credit Standing Adjustment

The credit standing adjustment is an estimate of the adjustment to the fair value that market participants would require in determining fair value to reflect the risk that GMWB benefit obligations or the GMWB reinsurance recoverables will not be fulfilled. The Company incorporates a blend of estimates of peer company and reinsurer bond spreads and credit default spreads from capital markets, adjusted for market recoverability.

Margins

The behavior risk margin adds a margin that market participants would require, in determining fair value, for the risk that the Company’s assumptions about policyholder behavior could differ from actual experience. The behavior risk margin is calculated by taking the difference between adverse policyholder behavior assumptions and best estimate assumptions.

2. Fair Value Measurements (continued)

Valuation Inputs Used in Levels 2 and 3 Measurements for GMWB and FIA Embedded, Customized and Reinsurance Derivatives

Level 2 Primary Observable Inputs	Level 3 Primary Unobservable Inputs
• Risk-free rates as represented by the Eurodollar futures, LIBOR deposits and swap rates to derive forward curve rates • Correlations of 10 years of observed historical returns across underlying well-known market indices • Correlations of historical index returns compared to separate account fund returns • Equity index levels	• Market implied equity volatility assumptions • Credit standing adjustment assumptions • Option budgets Assumptions about policyholder behavior, including: • Withdrawal utilization • Withdrawal rates • Lapse rates • Reset elections

Significant Unobservable Inputs for Level 3 GMWB Embedded, Customized and Reinsurance Derivatives

	As of December 31, 2021			
	Unobservable Inputs (Minimum)	Unobservable Inputs (Maximum)	Weighted Average	Impact of Increase in Input on Fair Value Liability [1]
Withdrawal utilization [2]	—%	100%	62%	Increase
Withdrawal rates [3]	4%	8%	6%	Increase
Lapse rates [4]	—%	48%	5%	Decrease [8]
Reset elections [5]	—%	99%	8%	Decrease [8]
Equity volatility [6]	11%	25%	21%	Increase
Credit standing adjustment [7]	0.03%	0.15%	0.09%	Decrease

Significant Unobservable Inputs for Level 3 FIA Embedded Derivative

	As of December 31, 2021			
	Unobservable Inputs (Minimum)	Unobservable Inputs (Maximum)	Weighted Average	Impact of Increase in Input on Fair Value Liability [1]
Withdrawal rates [3]	—%	16%	2%	Decrease
Lapse rates [4]	1%	34%	6%	Decrease
Option budgets [9]	1%	4%	2%	Increase
Credit standing adjustment [7]	0.01%	0.08%	0.05%	Decrease

[1] Conversely, the impact of a decrease in input would have the opposite impact to the fair value as that presented in the table.
[2] Range represents assumed percentages of policyholders taking withdrawals.
[3] Range represents assumed annual percentage of allowable amount withdrawn.
[4] Range represents assumed annual percentages of policyholders electing a full surrender.
[5] Range represents assumed annual percentages of eligible policyholders electing to reset their guaranteed benefit base.
[6] Range represents implied market volatilities for equity indices based on multiple pricing sources.
[7] Range represents Company credit spreads, adjusted for market recoverability.
[8] The impact may be an increase for some contracts, particularly those with out of the money guarantees.
[9] Range represents assumed annual budget for index options.

Separate Account Assets

Separate account assets are primarily invested in mutual funds. Other separate account assets include fixed maturities, limited partnerships, equity securities, short-term investments and derivatives that are valued in the same manner, and using the same pricing sources and inputs, as those investments held by the Company. For limited partnerships in which fair value represents the separate account's share of the NAV, 40% and 43% were subject to significant liquidation restrictions as of December 31, 2021. Total limited partnerships that do not allow any form of redemption were 0% as of December 31, 2021. Separate account assets classified as Level 3 primarily include long-dated bank loans, subprime RMBS and commercial mortgage loans.

2. Fair Value Measurements (continued)

Level 3 Assets and Liabilities Measured at Fair Value on a Recurring Basis Using Significant Unobservable Inputs

The Company uses derivative instruments to manage the risk associated with certain assets and liabilities. However, the derivative instrument may not be classified within the same fair value hierarchy level as the associated asset or liability. Therefore, the realized and unrealized gains and losses on derivatives reported in the Level 3 roll-forward may be offset by realized and unrealized gains and losses of the associated assets and liabilities in other line items of the financial statements.

The following table presents a reconciliation of the beginning and ending balances for fair value measurements for the period of July 1, 2021 to December 31, 2021, for which the Company had used significant unobservable inputs (Level 3):

Fair Value Rollforwards for Financial Instruments Classified as Level 3

[1] The Company classifies realized and unrealized gains (losses) on FIA and GMWB reinsurance derivatives and GMWB embedded derivatives as unrealized gains (losses) for purposes of disclosure in this table because it is impracticable to track on a contract-by-contract basis the realized gains (losses) for these derivatives and embedded derivatives.

[2] Amounts in these columns are generally reported in net realized capital gains (losses). The realized/unrealized gains (losses) included in net income for separate account assets are offset by an equal amount for separate account liabilities, which results in a net zero impact on net income for the Company. All amounts are before income taxes and amortization.

2. Fair Value Measurements (continued)

[3] *All amounts are before income taxes and amortization.*
[4] *Transfers in and/or (out) of Level 3 are primarily attributable to the availability of market observable information and the re-evaluation of the observability of pricing inputs.*
[5] *Derivative instruments are reported in this table on a net basis for asset (liability) positions and reported in the Consolidated Balance Sheet in other investments and other liabilities.*
[6] *Includes both market and non-market impacts in deriving realized and unrealized gains (losses).*

Fixed maturities, AFS		
Sale proceeds	$	2,372
Gross gains		14
Gross losses		(16)

3. Investments (continued)

Sales of fixed maturities, AFS in 2021 were primarily a result of tactical changes to the portfolio driven by changing market conditions, in addition to duration and liquidity management.

Accrued Interest Receivable on Fixed Maturities, AFS and Mortgage Loans

As of December 31, 2021 the Company reported accrued interest receivable related to fixed maturities, AFS of $178, and accrued interest receivable related to mortgage loans of $6. These amounts are recorded in other assets on the Consolidated Balance Sheet and are not included in the carrying value of the fixed maturities or mortgage loans. The Company does not include the current accrued interest receivable balance when estimating the ACL. The Company has a policy to write-off accrued interest receivable balances that are more than 90 days past due. Write-offs of accrued interest receivable are recorded as a credit loss component of realized capital gains and losses.

Interest income on fixed maturities and mortgage loans is accrued unless it is past due over 90 days or management deems the interest uncollectible.

Recognition and Presentation of Intent-to-Sell Impairments and ACL on Fixed Maturities, AFS

The Company will record an "intent-to-sell impairment" as a reduction to the amortized cost of fixed maturities, AFS in an unrealized loss position if the Company intends to sell or it is more likely than not that the Company will be required to sell the fixed maturity before a recovery in value. A corresponding charge is recorded in net realized capital losses equal to the difference between the fair value on the impairment date and the amortized cost basis of the fixed maturity before recognizing the impairment.

When fixed maturities are in an unrealized loss position and the Company does not record an intent-to-sell impairment, the Company will record an ACL, through net realized capital gains and losses, for the portion of the unrealized loss due to a credit loss. Any remaining unrealized loss on a fixed maturity after recording an ACL is the non-credit amount and is recorded in OCI. The ACL is the excess of the amortized cost over the greater of the Company's best estimate of the present value of expected future cash flows or the security's fair value. Cash flows are discounted at the effective yield that is used to record interest income. The ACL cannot exceed the unrealized loss and, therefore, it may fluctuate with changes in the fair value of the fixed maturity if the fair value is greater than the Company's best estimate of the present value of expected future cash flows. The initial ACL and any subsequent changes are recorded in net realized capital gains and losses. The ACL is written off against the amortized cost in the period in which all or a portion of the related fixed maturity is determined to be uncollectible.

Developing the Company’s best estimate of expected future cash flows is a quantitative and qualitative process that incorporates information received from third-party sources along with certain internal assumptions regarding the future performance. The Company's considerations include, but are not limited to (a) changes in the financial condition of the issuer and/or the underlying collateral, (b) whether the issuer is current on contractually obligated interest and principal payments, (c) credit ratings, (d) payment structure of the security and (e) the extent to which the fair value has been less than the amortized cost of the security.

For non-structured securities, assumptions include, but are not limited to, economic and industry-specific trends and fundamentals, instrument-specific developments including changes in credit ratings, industry earnings multiples and the issuer’s ability to restructure, access capital markets, and execute asset sales.

For structured securities, assumptions include, but are not limited to, various performance indicators such as historical and projected default and recovery rates, credit ratings, current and projected delinquency rates, loan-to-value ratios ("LTVs"), average cumulative collateral loss rates that vary by vintage year, prepayment speeds, and property value declines. These assumptions require the use of significant management judgment and include the probability of issuer default and estimates regarding timing and amount of expected recoveries which may include estimating the underlying collateral value.

ACL on Fixed Maturities, AFS by Type for the Period of July 1, 2021 to December 31, 2021

(Before tax)	Corporate	Total
Balance, beginning of period	$ —	$ —
Credit losses on fixed maturities where an allowance was not previously recorded	—	—
Balance, end of period	**$ —**	**$ —**

3. Investments (continued)

Fixed Maturities, AFS

Fixed Maturities, AFS by Type

	December 31, 2021				
	Amortized Cost	ACL	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
ABS	$ 260	$ —	$ —	$ (2)	$ 258
CLOs	945	—	—	(1)	944
CMBS	2,345	—	4	(14)	2,335
Corporate	13,380	—	50	(73)	13,357
Foreign government/government agencies	365	—	1	(4)	362
Municipal bonds	1,452	—	10	(6)	1,456
RMBS	818	—	—	(7)	811
U.S. Treasuries	1,599	—	28	(1)	1,626
Total fixed maturities, AFS	**$ 21,164**	**$ —**	**$ 93**	**$ (108)**	**$ 21,149**

Fixed Maturities, AFS by Contractual Maturity Year

	December 31, 2021	
Contractual Maturity	Amortized Cost	Fair Value
One year or less	$ 341	$ 341
Over one year through five years	3,082	3,068
Over five years through ten years	5,248	5,241
Over ten years	8,125	8,151
Subtotal	16,796	16,801
Mortgage-backed and asset-backed securities	4,368	4,348
Total fixed maturities, AFS	**$ 21,164**	**$ 21,149**

Estimated maturities may differ from contractual maturities due to call or prepayment provisions. Due to the potential for variability in payment speeds (i.e. prepayments or extensions), mortgage-backed and asset-backed securities are not categorized by contractual maturity.

Concentration of Credit Risk

The Company aims to maintain a diversified investment portfolio including issuer, sector and geographic stratification, where applicable, and has established certain exposure limits, diversification standards and review procedures to mitigate credit risk.

The Company had no investment exposure to any credit concentration risk of a single issuer greater than 10% of the Company's stockholders' equity, other than the U.S. government and certain U.S. government agencies as of December 31, 2021. As of December 31, 2021, other than U.S. government and certain U.S. government agencies, the Company’s three largest exposures by issuer were the Harbourvest Structured Solutions IV, the IBM Corporation, and the Wells Fargo & Company, which each comprised less than 1% of total invested assets.

The Company’s three largest exposures by sector as of December 31, 2021, were financial services, U.S. Treasuries, and utilities which comprised approximately 9%, 9%, and 7%, respectively, of total invested assets.

3. Investments (continued)

Unrealized Losses on Fixed Maturities, AFS

Unrealized Loss Aging for Fixed Maturities, AFS by Type and Length of Time as of December 31, 2021

	Less Than 12 Months		12 Months or More		Total	
	Fair Value	Unrealized Losses	Fair Value	Unrealized Losses	Fair Value	Unrealized Losses
ABS	$ 252	$ (2)	$ —	$ —	$ 252	$ (2)
CLOs	751	(1)	—	—	751	(1)
CMBS	961	(14)	—	—	961	(14)
Corporate	5,788	(73)	—	—	5,788	(73)
Foreign government/government agencies	173	(4)	—	—	173	(4)
Municipal	337	(6)	—	—	337	(6)
RMBS	537	(7)	—	—	537	(7)
U.S. Treasuries	217	(1)	—	—	217	(1)
Total fixed maturities, AFS in an unrealized loss position	**$ 9,016**	**$ (108)**	**$ —**	**$ —**	**$ 9,016**	**$ (108)**

As of December 31, 2021, fixed maturities, AFS in an unrealized loss position consisted of 1,680 instruments, primarily in the corporate sectors, most notably utilities, financial services, technology and communications, and energy, as well as CMBS which were depressed largely due to higher interest rates and/or wider credit spreads since the purchase date. As of December 31, 2021, 100% of these fixed maturities were depressed less than 20% of cost or amortized cost.

There were no fixed maturities depressed for twelve months or more. The Company neither has an intention to sell nor does it expect to be required to sell the fixed maturities outlined in the preceding discussion. The decision to record credit losses on fixed maturities, AFS in the form of an ACL requires us to make qualitative and quantitative estimates of expected future cash flows. Actual cash flows could deviate significantly from our expectations resulting in realized losses in future periods.

Mortgage Loans

ACL on Mortgage Loans

The Company reviews mortgage loans on a quarterly basis to estimate the ACL, with changes in the ACL recorded in net realized capital gains (losses). Apart from an ACL recorded on individual mortgage loans where the borrower is experiencing financial difficulties, the Company records an ACL on the pool of mortgage loans based on lifetime expected credit losses. The Company utilizes a third-party forecasting model to estimate lifetime expected credit losses at a loan level under multiple economic scenarios. The scenarios use macroeconomic data provided by an internationally recognized economics firm that generates forecasts of varying economic factors such as GDP growth, unemployment and interest rates. The economic scenarios are projected over 10 years. The first two to four years of the 10-year period assume a specific modeled economic scenario (including moderate upside, moderate recession and severe recession scenarios) and then revert to historical long-term assumptions over the remaining period. Using these economic scenarios, the forecasting model projects property-specific operating income and capitalization rates used to estimate the value of a future operating income stream. The operating income and the property valuations derived from capitalization rates are compared to loan payment and principal amounts to create debt-service coverage ratios ("DSCRs") and LTVs over the forecast period. The model overlays historical data about mortgage loan performance based on DSCRs and LTVs and projects the probability of default, amount of loss given a default and resulting expected loss through maturity for each loan under each economic scenario. Economic scenarios are probability-weighted based on a statistical analysis of the forecasted economic factors and qualitative analysis. The Company records the change in the ACL on mortgage loans based on the weighted-average expected credit losses across the selected economic scenarios.

When a borrower is experiencing financial difficulty, including when foreclosure is probable, the Company measures an ACL on individual mortgage loans. The ACL is established for any shortfall between the amortized cost of the loan and the fair value of the collateral less costs to sell. Estimates of collectability from an individual borrower require the use of significant management judgment and include the probability and timing of borrower default and loss severity estimates. In addition, cash flow projections may change based upon new information about the borrower's ability to pay and/or the value of underlying collateral such as changes in projected property value estimates. As of December 31, 2021, the Company did not have any mortgage loans for which an ACL was established on an individual basis.

3. Investments (continued)

There were no mortgage loans held-for-sale as of December 31, 2021. In addition, as of December 31, 2021, the Company had no mortgage loans that have had extensions or restructurings other than what is allowable under the original terms of the contract.

ACL on Mortgage Loans

	For the Period of July 1, 2021 to December 31, 2021
Beginning balance	**$ —**
Sixth Street Acquisition [1]	12
Ending balance	**$ 12**

[1] For information regarding the Sixth Street Acquisition, see Note 1 - Basis of Presentation and Significant Accounting Policies of Notes to Consolidated Financial Statements.

The increase in the allowance for the period of July 1, 2021 to December 31, 2021 was the result of the Sixth Street Acquisition. We continue to monitor the impact on our mortgage loan portfolio from borrower behavior in response to the economic stress caused by the pandemic. Borrowers with lower LTVs have an incentive to continue to make payments of principal and/or interest in order to preserve the equity they have in the underlying commercial real estate properties.

The weighted-average LTV ratio of the Company's mortgage loan portfolio was 51% as of December 31, 2021, while the weighted-average LTV ratio at origination of these loans was 61%. LTV ratios compare the loan amount to the value of the underlying property collateralizing the loan with property values based on appraisals updated no less than annually. Factors considered in estimating property values include, among other things, actual and expected property cash flows, geographic market data and the ratio of the property's net operating income to its value. DSCR compares a property's net operating income to the borrower's principal and interest payments and are updated no less than annually through reviews of underlying properties.

Mortgage Loans LTV & DSCR by Origination Year as of December 31, 2021

East South Central	20	0.9 %
Middle Atlantic	152	7.1 %
Mountain	142	6.6 %
New England	87	4.1 %
Pacific	559	26.1 %
South Atlantic	627	29.3 %
West South Central	184	8.6 %
Other [2]	294	13.7 %
Total mortgage loans	**$ 2,143**	**100 %**

[1] As of December 31, 2021, the amortized cost of mortgage loans excludes ACL of $12.

3. Investments (continued)

[2] Primarily represents loans collateralized by multiple properties in various regions.

Mortgage Loans by Property Type

	December 31, 2021		
	Amortized Cost [1]		Percent of Total
Commercial			
Industrial	$	711	33.2 %
Multifamily		590	27.5 %
Office		423	19.7 %
Retail		403	18.8 %
Single Family		16	0.8 %
Total mortgage loans	**$**	**2,143**	**100 %**

[1] As of December 31, 2021, the amortized cost of mortgage loans excludes ACL of $12.

Past-Due Mortgage Loans

Mortgage loans are considered past due if a payment of principal or interest is not received according to the contractual terms of the loan agreement, which typically includes a grace period. As of December 31, 2021, the Company held no mortgage loans considered past due.

Purchased Financial Assets with Credit Deterioration

Purchased financial assets with credit deterioration ("PCD") are purchased financial assets with a “more-than-insignificant” amount of credit deterioration since origination. PCD assets are assessed only at initial acquisition date and for any investments identified, the Company records an allowance at acquisition with a corresponding increase to the amortized cost basis. As of December 31, 2021, the Company held no PCD fixed maturities, AFS or mortgage loans.

Variable Interest Entities

The Company is engaged with various special purpose entities and other entities that are deemed to be variable interest entities ("VIEs") primarily as an investor through normal investment activities.

A VIE is an entity that either has investors that lack certain essential characteristics of a controlling financial interest, such as simple majority kick-out rights, or lacks sufficient funds to finance its own activities without financial support provided by other entities. The Company performs ongoing qualitative assessments of its VIEs to determine whether the Company has a controlling financial interest in the VIE and therefore is the primary beneficiary. The Company is deemed to have a controlling financial interest when it has both the ability to direct the activities that most significantly impact the economic performance of the VIE and the obligation to absorb losses or right to receive benefits from the VIE that could potentially be significant to the VIE. Based on the Company’s assessment, if it determines it is the primary beneficiary, the Company consolidates the VIE on the Company’s Consolidated Financial Statements. As of December 31, 2021, the Company did not hold any VIEs for which it was the primary beneficiary.

Non-Consolidated VIEs

The Company, through normal investment activities, makes passive investments in limited partnerships and other alternative investments. For these non-consolidated VIEs, the Company has determined it is not the primary beneficiary as it has no ability to direct activities that could significantly affect the economic performance of the investments. The Company’s maximum exposure to loss as of December 31, 2021 is limited to the total carrying value of $1.1 billion, which are included in limited partnerships and other alternative investments on the Company's Consolidated Balance Sheet. As of December 31, 2021, the Company had outstanding commitments totaling $419, whereby the Company is committed to fund these investments and may be called by the partnership during the commitment period to fund the purchase of new investments and partnership expenses. These investments are generally of a passive nature in that the Company does not take an active role in management.

In addition, the Company makes passive investments in structured securities issued by VIEs for which the Company is not the manager. These investments are included in ABS, CLOs, CMBS, and RMBS and are reported in fixed maturities, AFS on the Company’s Consolidated Balance Sheet. The Company has not provided financial or other support with respect to these investments other than its original investment. For these investments, the Company determined it is not the primary

3. Investments (continued)

beneficiary due to the relative size of the Company's investment in comparison to the principal amount of the structured securities issued by the VIEs, the Company's inability to direct the activities that most significantly impact the economic performance of the VIEs, and, where applicable, the level of credit subordination which reduces the Company's obligation to absorb losses or right to receive benefits. The Company's maximum exposure to loss on these investments is limited to the amount of the Company's investment.

Repurchase Agreements and Other Collateral Transactions

The Company enters into securities financing transactions as a way to earn additional income or manage liquidity, primarily through repurchase agreements.

Repurchase Agreements

From time to time, the Company enters into repurchase agreements to manage liquidity or to earn incremental income. A repurchase agreement is a transaction in which one party (transferor) agrees to sell securities to another party (transferee) in return for cash (or securities), with a simultaneous agreement to repurchase the same securities at a specified price at a later date. The maturity of these transactions is generally of ninety days or less. Repurchase agreements include master netting provisions that provide both parties the right to offset claims and apply securities held by them with respect to their obligations in the event of a default. Although the Company has the contractual right to offset claims, the Company's current positions do not meet the specific conditions for net presentation.

Under repurchase agreements, the Company transfers collateral of U.S. government and government agency securities and receives cash. For repurchase agreements, the Company obtains cash in an amount equal to at least 95% of the fair value of the securities transferred. The agreements require additional collateral to be transferred under specified conditions and provide the counterparty the right to sell or re-pledge the securities transferred. The cash received from the repurchase program is typically invested in short-term investments or fixed maturities and is reported as an asset on the Company's Consolidated Balance Sheet. The Company accounts for the repurchase agreements as collateralized borrowings. The securities transferred under repurchase agreements are included in fixed maturities, AFS with the obligation to repurchase those securities recorded in other liabilities on the Company's Consolidated Balance Sheet.

From time to time, the Company enters into reverse repurchase agreements where the Company purchases securities and simultaneously agrees to resell the same or substantially the same securities. The maturity of these transactions is generally within one year. The agreements require additional collateral to be transferred to the Company under specified conditions and the Company has the right to sell or re-pledge the securities received. The Company accounts for reverse repurchase agreements as collateralized financing. The receivable for reverse repurchase agreements is included within short-term investments in the Company's Consolidated Balance Sheet.

Repurchase Agreements

	December 31, 2021	
	Fair Value	
Repurchase agreements:		
Gross amount of recognized liabilities for repurchase agreements	$	663
Gross amount of collateral pledged related to repurchase agreements [1]	$	679
Gross amount of recognized receivables for reverse repurchase agreements [2]	$	44

[1] Collateral pledged is included within fixed maturities, AFS and short-term investments on the Company's Consolidated Balance Sheet.
[2] Collateral received is included within short-term investments on the Company's Consolidated Balance Sheet.

Other Collateral Transactions

The Company is required by law to deposit securities with government agencies in certain states in which it conducts business. As of December 31, 2021, the fair value of securities on deposit was $26.

For disclosure of collateral in support of derivative transactions, refer to the Derivative Collateral Arrangements section of Note 4 - Derivatives of Notes to Consolidated Financial Statements.

Equity Method Investments

The majority of the Company's investments in limited partnerships and other alternative investments, including hedge funds, mortgage and real estate funds, and private equity and other funds (collectively, "limited partnerships"), are accounted for

3. Investments (continued)

under the equity method of accounting. The Company recognized total equity method income of $259 for the period of July 1, 2021 to December 31, 2021. Equity method income is reported in net investment income. The Company's maximum exposure to loss as of December 31, 2021 is limited to the total carrying value of $1.1 billion. In addition, the Company has outstanding commitments totaling approximately $420, to fund limited partnership and other alternative investments as of December 31, 2021.

The Company's investments in limited partnerships are generally of a passive nature in that the Company does not take an active role in the management of the limited partnerships. In 2021, aggregate investment income (losses) from limited partnerships and other alternative investments exceeded 10% of the Company's pre-tax consolidated net income. Accordingly, the Company is disclosing aggregated summarized financial data for the Company's limited partnership investments. This aggregated summarized financial data does not represent the Company's proportionate share of limited partnership assets or earnings. Aggregate total assets of the limited partnerships in which the Company invested totaled $171.1 billion as of December 31, 2021. Aggregate total liabilities of the limited partnerships in which the Company invested totaled $30.8 billion as of December 31, 2021. Aggregate net investment income (loss) of the limited partnerships in which the Company invested totaled $2.0 billion for the years ended December 31, 2021. Aggregate net income excluding net investment income of the limited partnerships in which the Company invested totaled $31.4 billion. As of, and for the year ended, December 31, 2021, the aggregated summarized financial data reflects the latest available financial information.

4. Derivatives

Derivative Instruments

The Company utilizes a variety of OTC, OTC-cleared and exchange traded derivative instruments as a part of its overall risk management strategy as well as to enter into replication transactions. Derivative instruments are used to manage risk associated with interest rate, equity market, credit spread, issuer default, price, and currency exchange rate risk or volatility. Replication transactions are used as an economical means to synthetically replicate the characteristics and performance of assets that are permissible investments under the Company's investment policies. The Company also may enter into and has previously issued financial instruments and products that either are accounted for as freestanding derivatives, such as certain reinsurance contracts, or as embedded derivative instruments, such as certain GMWB riders included with certain variable annuity products.

Strategies that Qualify for Hedge Accounting

Some of the Company's derivatives satisfy hedge accounting requirements as outlined in Note 1 of these financial statements. Typically, these hedging instruments include interest rate swaps and, to a lesser extent, foreign currency swaps where the terms or expected cash flows of the hedged item closely match the terms of the swap. The interest rate swaps are typically used to manage interest rate duration of certain fixed maturity securities or liability contracts. As a result of pushdown accounting, derivative instruments that previously qualified for hedge accounting were de-designated and recorded at fair value through adjustments to additional paid in capital at the acquisition date. The hedge strategies by hedge accounting designation include:

Cash Flow Hedges

Interest rate swaps are predominantly used to manage portfolio duration and better match cash receipts from assets with cash disbursements required to fund liabilities. These derivatives primarily convert interest receipts on floating-rate fixed maturity securities to fixed rates. Foreign currency swaps are used to convert foreign currency-denominated cash flows related to certain investment receipts and liability payments to U.S. dollars in order to reduce cash flow fluctuations due to changes in currency rates.

Non-qualifying Strategies

Derivative relationships that do not qualify for hedge accounting ("non-qualifying strategies") primarily include the hedge program for the Company's variable annuity products as well as the hedging and replication strategies that utilize credit default swaps. In addition, hedges of interest rate, foreign currency and equity risk of certain fixed maturities, equities and liabilities do not qualify for hedge accounting.

The non-qualifying strategies include:

Interest Rate Swaps, Swaptions and Futures

The Company uses interest rate swaps, swaptions and futures to manage interest rate duration between assets and liabilities in certain investment portfolios. In addition, the Company enters into interest rate swaps to terminate existing swaps, thereby offsetting the changes in value of the original swap. As of December 31, 2021, the notional amount of interest rate swaps in offsetting relationships was $506.

Foreign Currency Swaps and Forwards

The Company enters into foreign currency swaps to convert the foreign currency exposures of certain foreign currency-denominated fixed maturity investments to U.S. dollars. The Company also enters into foreign currency forwards to hedge non-U.S. dollar denominated cash.

Credit Contracts

Credit default swaps are used to purchase credit protection on an individual entity or referenced index to economically hedge against default risk and credit-related changes in the value of fixed maturity securities. Credit default swaps are also used to assume credit risk related to an individual entity or referenced index as a part of replication transactions. These contracts require the Company to pay or receive a periodic fee in exchange for compensation from the counterparty or the Company should the referenced security issuers experience a credit event, as defined in the contract. In addition, the Company enters into credit default swaps to terminate existing credit default swaps, thereby offsetting the changes in value of the original swap going forward.

4. Derivatives (continued)

Equity Index Swaps and Options

The Company enters into equity index options to hedge the impact of a decline in the equity markets on the investment portfolio.

Macro Hedge Program

The Company utilizes equity swaps, options and futures as well as interest rate swaps to provide protection against the statutory tail scenario risk to the Company's statutory surplus arising from higher GMDB claims as well as lower variable annuity fee revenue.

GMWB Derivatives, net

The Company formerly offered certain variable annuity products with GMWB riders. The GMWB product is a bifurcated embedded derivative (“GMWB product derivatives”) that has a notional value equal to the GRB. The Company uses reinsurance contracts to transfer a portion of its risk of loss due to GMWB. The reinsurance contracts covering GMWB (“GMWB reinsurance contracts”) are accounted for as freestanding derivatives with a notional amount equal to the GRB reinsured.

FIA Embedded Derivative

On December 30, 2021, the Company assumed through reinsurance, certain FIA products with index-based crediting that constitutes an embedded derivative. The cedant hedges this risk and provides the benefits of this hedging as part of the reinsurance settlements.

Modified Coinsurance Reinsurance Contracts

As of December 31, 2021, the Company had approximately $775 of invested assets supporting other policyholder funds and benefits payable reinsured under a modified coinsurance arrangement in connection with the sale of the Individual Life business, which was structured as a reinsurance transaction. The assets are primarily held in a trust established by the Company. The Company pays or receives cash quarterly to settle the operating results of the reinsured business, including the investment results. As a result of this modified coinsurance arrangement, the Company has an embedded derivative that transfers to the reinsurer certain unrealized changes in fair value of investments subject to interest rate and credit risk. The notional amount of the embedded derivative reinsurance contracts are the invested assets which are carried at fair value and support the reinsured reserves.

Derivative Balance Sheet Classification

For reporting purposes, the Company has elected to offset within assets or liabilities based upon the net of the fair value amounts, income accruals, and related cash collateral receivables and payables of OTC derivative instruments executed in a legal entity and with the same counterparty under a master netting agreement, which provides the Company with the legal right of offset. The following fair value amounts do not include income accruals or related cash collateral receivables and payables, which are netted with derivative fair value amounts to determine balance sheet presentation. Derivatives in the Company’s separate accounts, where the associated gains and losses accrue directly to policyholders are not included in the table below. The Company’s derivative instruments are held for risk management purposes, unless otherwise noted in the following table. The notional amount of derivative contracts represents the basis upon which pay or receive amounts are calculated and is presented in the table to quantify the volume of the Company’s derivative activity. Notional amounts are not necessarily reflective of credit risk. The following tables exclude investments that contain an embedded credit derivative for which the Company has elected the fair value option.

4. Derivatives (continued)

[1] These derivatives are embedded within liabilities and are not held for risk management purposes.

Offsetting of Derivative Assets/Liabilities

The following tables present the gross fair value amounts, the amounts offset, and net position of derivative instruments eligible for offset on the Company's Consolidated Balance Sheet. Amounts offset include fair value amounts, income accruals and related cash collateral receivables and payables associated with derivative instruments that are traded under a common master netting agreement, as described in the preceding discussion. Also included in the tables are financial collateral receivables and payables, which are contractually permitted to be offset upon an event of default, although are disallowed for offsetting under U.S. GAAP.

4. Derivatives (continued)

Offsetting Derivative Assets and Liabilities

	(i)	(ii)	(iii) = (i) - (ii)		(iv)	(v) = (iii) - (iv)
			Net Amounts Presented on the Statement of Financial Position		Collateral Disallowed for Offset on the Statement of Financial Position	
	Gross Amounts of Recognized Assets (Liabilities)	Gross Amounts Offset on the Statement of Financial Position	Derivative Assets [1] (Liabilities) [2]	Accrued Interest and Cash Collateral (Received) [3] Pledged [2]	Financial Collateral (Received) Pledged [4]	Net Amount
As of December 31, 2021						
Other investments	$ 176	$ 162	$ 43	$ (29)	$ 5	$ 9
Other liabilities	(385)	(134)	(252)	1	(251)	—

[1] Included in other invested assets on the Company's Consolidated Balance Sheet.
[2] Included in other liabilities on the Company's Consolidated Balance Sheet and is limited to the net derivative payable associated with each counterparty.
[3] Included in other investments on the Company's Consolidated Balance Sheet and is limited to the net derivative receivable associated with each counterparty.
[4] Excludes collateral associated with exchange-traded derivative instruments.

Cash Flow Hedges

For derivative instruments that are designated and qualify as cash flow hedges, the gain or loss on the derivative is reported as a component of OCI and reclassified into earnings in the same period or periods during which the hedged transaction affects earnings. All components of each derivative's gain or loss were included in the assessment of hedge effectiveness.

Derivatives in Cash Flow Hedging Relationships

Gain (Loss) Recognized in OCI

	For the Period of July 1, 2021 to December 31, 2021
Interest rate swaps	$ —
Foreign currency swaps	—
Total	**$ —**

Derivatives in Cash Flow Hedging Relationships

Gain (Loss) Reclassified from AOCI into Income

	For the Period of July 1, 2021 to December 31, 2021	
	Net Realized Capital Gain (Loss)	Net Investment Income
Interest rate swaps	—	—
Foreign currency swaps	—	—
Total	**$ —**	**$ —**
Total amounts presented on the Consolidated Statements of Operation	**$ (20)**	**$ 498**

As of December 31, 2021, the before tax deferred net gains on derivative instruments recorded in AOCI that are expected to be reclassified to earnings during the next twelve months was $1. This expectation is based on the anticipated interest payments on hedged investments in fixed maturity securities that will occur over the next twelve months, at which time the Company will recognize the deferred net gains (losses) as an adjustment to net investment income over the term of the investment cash flows.

The Company had no net reclassifications from AOCI to earnings resulting from the discontinuance of cash-flow hedges due to forecasted transactions that were no longer probable of occurring.

Non-qualifying Strategies

4. Derivatives (continued)

For non-qualifying strategies, including embedded derivatives that are required to be bifurcated from their host contracts and accounted for as derivatives, the gain or loss on the derivative is recognized currently in earnings within net realized capital gains (losses).

Non-qualifying Strategies
Gain (Loss) Recognized within Net Realized Capital Gains (Losses)

	For the Period of July 1, 2021 to December 31, 2021

Other	
Modified coinsurance reinsurance contracts	15
Total other non-qualifying derivatives	37
Total [1]	**$ (25)**

[1] Excludes investments that contain an embedded credit derivative for which the Company has elected the fair value option.

Credit Risk Assumed through Credit Derivatives

The Company enters into credit default swaps that assume credit risk of a single entity or referenced index in order to synthetically replicate investment transactions that are permissible under the Company's investment policies. The Company will receive periodic payments based on an agreed upon rate and notional amount and will only make a payment if there is a credit event. A credit event payment will typically be equal to the notional value of the swap contract less the value of the referenced security issuer's debt obligation after the occurrence of the credit event. A credit event is generally defined as a default on contractually obligated interest or principal payments or bankruptcy of the referenced entity. The credit default swaps in which the Company assumes credit risk primarily reference investment grade single corporate issuers and baskets, which include standard diversified portfolios of corporate and CMBS issuers. The diversified portfolios of corporate issuers are established within sector concentration limits and may be divided into tranches that possess different credit ratings.

As of December 31, 2021

				Underlying Referenced Credit Obligation(s) [1]			
Credit Derivative Type by Derivative Risk Exposure	**Notional Amount [2]**	**Fair Value**	**Weighted Average Years to Maturity**	**Type**	**Average Credit Rating**	**Offsetting Notional Amount**	**Offsetting Fair Value**
Basket credit default swaps [3]							
Investment grade risk exposure	$ 100	$ 2	5 years	Corporate Credit	BBB+	$ —	$ —
Total	**$ 100**	**$ 2**				**$ —**	**$ —**

[1] The average credit ratings are based on availability and are generally the midpoint of the available ratings among Moody's, S&P, and Fitch. If no rating is available from a rating agency, then an internally developed rating is used.

[2] Notional amount is equal to the maximum potential future loss amount. These derivatives are governed by agreements and applicable law which include collateral posting requirements. There is no additional specific collateral related to these contracts or recourse provisions included in the contracts to offset losses.

4. Derivatives (continued)

[3] Comprised of swaps of standard market indices of diversified portfolios of corporate and CMBS issuers referenced through credit default swaps. These swaps are subsequently valued based upon the observable standard market index.

Derivative Collateral Arrangements

The Company enters into various collateral arrangements in connection with its derivative instruments, which require both the pledging and accepting of collateral. As of December 31, 2021, the Company pledged cash collateral with a fair value of $2, associated with derivative instruments. The collateral receivable has been recorded in other assets or other liabilities on the Company's Consolidated Balance Sheet, as determined by the Company's election to offset on the balance sheet. As of December 31, 2021, the Company also pledged securities collateral associated with derivative instruments with a fair value of $270, which have been included in fixed maturities on the Consolidated Balance Sheet. The counterparties have the right to sell or re-pledge these securities. In addition, as of December 31, 2021, the Company has pledged initial margin of cash related to OTC-cleared and exchange traded derivatives with a fair value of $4, which is recorded in other investments or other assets on the Company's Consolidated Balance Sheet. As of December 31, 2021, the Company has pledged initial margin of securities related to OTC-cleared and exchange traded derivatives with a fair value of $172, which are included within fixed maturities on the Company's Consolidated Balance Sheet.

As of December 31, 2021, the Company accepted cash collateral associated with derivative instruments of $30, which was invested and recorded on the Consolidated Balance Sheet in fixed maturities and short-term investments with corresponding amounts recorded in other investments or other liabilities as determined by the Company's election to offset on the balance sheet. The Company also accepted securities collateral as of December 31, 2021 with a fair value of $5, which the Company has the right to sell or repledge. As of December 31, 2021, the Company had not repledged securities and did not sell any securities. The non-cash collateral accepted was held in separate custodial accounts and was not included on the Company's Consolidated Balance Sheet.

5. Reinsurance

The Company uses reinsurance as a risk mitigation strategy, as well as a growth strategy. The Company assumes reinsurance from unaffiliated insurers in order to take on insurance risks not directly underwritten by the Company. The Company also cedes insurance to unaffiliated insurers to enable the Company to manage capital and risk exposure. Such arrangements do not relieve the Company of its primary liability to policyholders. Failure of reinsurers to honor their obligations could result in losses to the Company. The Company regularly monitors the financial condition and ratings of its reinsurers and structures agreements to provide collateral funds where necessary.

Assumed Reinsurance

As disclosed in Note 1 - Basis of Presentation and Significant Accounting Policies, on December 30, 2021, the Company entered into a reinsurance agreement with Allianz, whereby the Company assumed certain blocks of FIA on a coinsurance basis, including certain policies with living withdrawal benefits. The Company also acquired general account assets to support the assumed reserves. The following table presents the impact on the Consolidated Balance Sheet from the Company's assumed reinsurance:

Reinsurance executed on December 30, 2021		
Liabilities assumed	$	7,959
Net ceding commission paid		693
Less: assets received		(8,677)
Net deferred gain	**$**	**(25)**

For the period of July 1, 2021 through December 31, 2021, there was not a material impact on the Consolidated Statement of Operations from the Company's assumed reinsurance. As part of the Allianz reinsurance transaction, TL maintains a coinsurance trust for the benefit of Allianz. As of December 31, 2021 there were $8.0 billion of fixed income securities, $335 of short-term investments and $17 of cash in the coinsurance trust.

Ceded Reinsurance

Reinsurance recoverables include balances due from reinsurance companies and are presented net of ACL. The ACL represents an estimate of expected credit losses over the lifetime of the contracts that reflect management’s best estimate of reinsurance cessions that may be uncollectible in the future due to reinsurers’ inability to pay. Reinsurance recoverables include an estimate of the amount of policyholder benefits that may be ceded under the terms of the reinsurance agreements. Amounts recoverable from reinsurers are estimated in a manner consistent with assumptions used for the underlying policy benefits. Accordingly, the Company’s estimate of reinsurance recoverables is subject to similar risks and uncertainties as the estimate of the gross reserve for future policy benefits.

Reinsurance Recoverables, net

		As of December 31, 2021
Reserve for future policy benefits and other policyholder funds and benefits payable		
Sold businesses (MassMutual and Prudential)	$	19,850
Commonwealth		8,718
Other reinsurers		1,187
Gross reinsurance recoverables		**29,755**
Less: ACL		37
Reinsurance recoverables, net	**$**	**29,718**

As of December 31, 2021, the Company had reinsurance recoverables from Commonwealth Annuity and Life Insurance Company ("Commonwealth"), Massachusetts Mutual Life Insurance Company ("MassMutual") and Prudential Financial, Inc. ("Prudential") of approximately $8.7 billion, $6.8 billion and $13.1 billion, respectively. The Company's obligations to its direct policyholders that have been reinsured to Commonwealth, MassMutual and Prudential are primarily secured by invested assets held in trust.

As of December 31, 2021, the ACL was $37. The Company closely monitors the financial condition, ratings and current market information of all its counterparty reinsurers and records an ACL considering the credit quality of the reinsurer, the invested assets in trust, and the period over which the recoverable balances are expected to be collected. Counterparty risk

5. Reinsurance (continued)

is assessed on a pooled basis in cases of shared risk characteristics, and separately for individual reinsurers when it is more relevant. The Company evaluates historical events, current conditions, and reasonable and supportable forecasts in developing its ACL estimate. Where its contracts permit, the Company secures future claim obligations with various forms of collateral, including irrevocable letters of credit, secured trusts and funds held accounts. The ACL is estimated using a probability of default and loss given default model applied to the amount of reinsurance recoverables, net of collateral, exposed to loss. The probability of default factor is assigned based on each reinsurer's credit rating. The Company reassesses and updates credit ratings on a quarterly basis. The probability of default factors encompass historical industry defaults for liabilities with similar durations to the reinsured liabilities as estimated through multiple economic cycles. The loss given default factors are based on a study of historical recovery rates for general creditors of corporations through multiple economic cycles.

Insurance Revenues

	For the Period of July 1, 2021 to December 31, 2021
Gross earned premiums, fee income and other	$ 1,173
Reinsurance assumed	69
Reinsurance ceded	(801)
Net earned premiums, fee income and other	**$ 441**

Insurance recoveries on ceded reinsurance agreements, which reduce death and other benefits, were $782 for the period of July 1, 2021 to December 31, 2021. In addition, the Company has reinsured a portion of the risk associated with U.S. variable annuities and the associated GMDB and GMWB riders.

6. Value of Business Acquired

Changes in the VOBA Asset

		For the Period of July 1, 2021 to December 31, 2021
Balance, beginning of period	**$**	**—**
VOBA acquired [1]		565
Amortization - VOBA		(17)
Amortization - unlock benefit, pre-tax		4
Adjustments to unrealized gains on fixed maturities, AFS and other		3
Balance, end of period	**$**	**555**

[1] *For additional information regarding the VOBA acquired as part of the Sixth Street Acquisition, see Note 1 - Basis of Presentation and Significant Accounting Policies of Notes to Consolidated Financial Statements.*

Expected Amortization of VOBA

Years	Expected Amortization	
2022	$	28
2023	$	30
2024	$	32
2025	$	35
2026	$	39

7. Goodwill and Other Intangible Assets

Goodwill

As of December 31, 2021		
		Carrying Value
Balance, beginning of period	**$**	**—**
Acquisitions [1]		97
Accumulated impairments		—
Balance, end of period	**$**	**97**

[1] The acquisition of goodwill was related to the Sixth Street Acquisition. For more information, see Note 1 - Basis of Presentation and Significant Accounting Policies of Notes to Consolidated Financial Statements.

The goodwill from the Sixth Street Acquisition is attributable to the Company's expectation to leverage Sixth Street's capital management strategy for its life insurance business. Goodwill for the Sixth Street Acquisition is not deductible for tax purposes.

Other Intangible Assets

	Amortizing Intangible Assets [1]	Indefinite Lived Intangible Assets [2]	Total Other Intangible Assets
Gross carrying value, as of July 1, 2021	$ 29	$ 26	$ 55
Additions [3]	30	—	30
Accumulated amortization through December 31, 2021	21	—	21
Net carrying value, as of December 31, 2021	$ 38	$ 26	$ 64
Weighted average expected life in years	7		7

[1] Consists of internally developed software.
[2] Consists of state insurance licenses.
[3] Related to intangible assets from the election of pushdown accounting due to the Sixth Street Acquisition. For more information, see Note 1 - Basis of Presentation and Significant Accounting Policies of Notes to Consolidated Financial Statements.

Expected Pre-tax Amortization Expense

Years		Expected Future Amortization Expense
2022	$	6
2023	$	6
2024	$	6
2025	$	6
2026	$	6

8. Reserves for Future Policy Benefits and Separate Account Liabilities

Changes in Reserves for Future Policy Benefits

	Universal Life-Type Contracts				
	VA GMDB/ GMWB [1]	FIA Guarantees and Other [2]	Universal Life Secondary Guarantees	Traditional Annuity and Other Contracts [3]	Total Future Policy Benefits
Liability balance as of July 1, 2021	**$ 346**	**$ —**	**$ 4,394**	**$ 16,382**	**$ 21,122**
Incurred [4]	38	604	240	253	1,135
Paid	(44)	—	(29)	(486)	(559)
Liability balance as of December 31, 2021	**$ 340**	**$ 604**	**$ 4,605**	**$ 16,149**	**$ 21,698**
Reinsurance recoverable asset as of July 1, 2021	**$ 184**	**$ —**	**$ 4,394**	**$ 5,422**	**$ 10,000**
Incurred [4]	28	—	240	133	401
Paid	(37)	—	(29)	(133)	(199)
Reinsurance recoverable asset as of December 31, 2021	**$ 175**	**$ —**	**$ 4,605**	**$ 5,422**	**$ 10,202**

[1] These liability balances include all GMDB benefits, plus the life-contingent portion of GMWB benefits in excess of the return of the GRB. GMWB benefits up to the GRB are embedded derivatives held at fair value and are excluded from these balances.
[2] These liability balances include additional liabilities for expected annuitizations on two-tiered FIA's and GLWB's, as part of the Allianz reinsurance agreement entered into on December 30, 2021.
[3] Represents life-contingent reserves for which the company is subject to insurance and investment risk.
[4] Includes the portion of assessments established as additions to reserves, changes in estimates affecting the reserves and the amounts recoverable under modified coinsurance reinsurance agreements.

Account Value by GMDB/GMWB Type as of December 31, 2021

	Account Value (“AV”) [9]	Net amount at Risk (“NAR”) [10]	Retained Net Amount at Risk (“RNAR”) [10]	Weighted Average Attained Age of Annuitant
MAV [1]				
MAV only	$ 12,968	$ 1,351	$ 210	74
With 5% rollup [2]	952	62	19	75
With earnings protection benefit rider (“EPB”) [3]	3,284	620	84	75
With 5% rollup & EPB	452	99	21	76
Total MAV	17,656	2,132	334	
Asset protection benefit (“APB”) [4]	8,395	41	29	73
Lifetime income benefit (“LIB”) – death benefit [5]	354	2	2	75
Reset (5-7 years) [6]	2,505	6	4	72
Return of premium (“ROP”) /other [7]	5,422	42	24	75
Variable annuity without GMDB [8]	2,985	—	—	73
Subtotal variable annuity [11]	**$ 37,317**	**$ 2,223**	**$ 393**	**74**
Less: general account value	2,715			
Subtotal separate account liabilities with GMDB	**34,602**			
Separate account liabilities - other	76,990			
Total separate account liabilities	**$ 111,592**			

[1] MAV GMDB is the greatest of current AV, net premiums paid and the highest AV on any anniversary before age 80 years (adjusted for withdrawals).
[2] Rollup GMDB is the greatest of the MAV, current AV, net premium paid and premiums (adjusted for withdrawals) accumulated at generally 5% simple interest up to the earlier of age 80 years or 100% of adjusted premiums.
[3] EPB GMDB is the greatest of the MAV, current AV, or contract value plus a percentage of the contract’s growth. The contract’s growth is AV less premiums net of withdrawals, subject to a cap of 200% of premiums net withdrawals.
[4] APB GMDB is the greater of current AV or MAV, not to exceed current AV plus 25% times the greater of net premiums and MAV (each adjusted for premiums in the past 12 months).
[5] LIB GMDB is the greatest of current AV; net premiums paid; or, for certain contracts, a benefit amount generally based on market performance that ratchets over time.

8. Reserves for Future Policy Benefits and Separate Account Liabilities (continued)

[6] Reset GMDB is the greatest of current AV, net premiums paid and the most recent five to seven year anniversary AV before age 80 years (adjusted for withdrawals).
[7] ROP GMDB is the greater of current AV and net premiums paid.
[8] Includes account value for contracts that had a GMDB at issue but no longer have a GMDB due to certain elections made by policyholders or their beneficiaries.
[9] AV includes the contract holder's investment in the separate account and the general account.
[10] NAR is defined as the guaranteed minimum death benefit in excess of the current AV. RNAR represents NAR reduced for reinsurance. NAR and RNAR are highly sensitive to equity market movements and increase when equity markets decline.
[11] Some variable annuity contracts with GMDB also have a life-contingent GMWB that may provide for benefits in excess of the return of the GRB. Such contracts included in this amount have $4.8 billion of total account value and weighted average attained age of 76 years. There is no NAR or retained NAR related to these contracts.

Account Balance Breakdown of Variable Separate Account Investments for Contracts with Guarantees

Asset Type		December 31, 2021
Equity securities (including mutual funds)	$	33,240
Cash and cash equivalents [1]		1,362
Total [2]	**$**	**34,602**

[1] Represents an allocation of the portfolio holdings.
[2] Includes $3.0 billion of account value as of December 31, 2021 for contracts that had a GMDB at issue but no longer have a GMDB due to certain elections made by policyholders or their beneficiaries.

As of December 31, 2021, approximately 17%, of the equity securities (including mutual funds), in the preceding table were funds invested in fixed income securities and approximately 83%, were funds invested in equity securities.

For further information on guaranteed living benefits that are accounted for at fair value, such as GMWB, see Note 2 - Fair Value Measurements of Notes to Consolidated Financial Statements.

9. Debt

Collateralized Advances

The Company's subsidiaries TL and TLA are members of the Federal Home Loan Bank of Boston (“FHLBB”). Membership allows the Company via its subsidiaries access to collateralized advances, which may be used to support various spread-based business and enhance liquidity management. FHLBB membership requires its members to own member stock and advances require the purchase of activity stock. The amount of advances that can be taken are dependent on the asset types pledged to secure the advances. The CTDOI will permit the Company's subsidiaries to pledge up to approximately $731 in qualifying assets to secure FHLBB advances for 2022. The pledge limit is recalculated annually based on statutory admitted assets and capital and surplus. The Company's subsidiaries would need to seek the prior approval of the CTDOI in order to exceed these limits. As of December 31, 2021, the Company's subsidiaries had no advances outstanding under the FHLBB facility.

10. Income Taxes

Under current Bermuda law, the Company is not subject to income taxes in Bermuda. The Company has received an undertaking from the Minister of Finance in Bermuda that, in the event of any taxes being imposed which are computed on profits or income or computed on any capital asset, gain or appreciation or any tax in the nature of estate duty or inheritance tax, the Company will be exempt from such taxation in Bermuda until March 2035.

The Company has elected to be treated as a U.S. domestic insurance company for U.S. federal tax purposes under section 953(d) of the U.S. Internal Revenue Code and is therefore subject to income taxation in the U.S.

Income Tax Rate Reconciliation

	For the Period of July 1, 2021 to December 31, 2021
Tax provision at the U.S. Federal statutory rate	$ 86
Dividends received deduction ("DRD")	(16)
Foreign related investments	(2)
Other	(1)
Provision for income taxes	**$ 67**

The separate account DRD is estimated for the current year using information from the most recent return, adjusted for current year equity market performance and other appropriate factors, including estimated levels of corporate dividend payments and level of policy owner equity account balances. The actual current year DRD can vary from estimates based on, but not limited to, changes in eligible dividends received in the mutual funds, amounts of distributions from these mutual funds and the Company's taxable income before the DRD. The Company evaluates its DRD computations on a quarterly basis.

Provision for Income Taxes

Income Tax Expense (Benefit)	For the Period of July 1, 2021 to December 31, 2021
Current - U.S. Federal	$ 31
Deferred - U.S. Federal	36
Total income tax expense (benefit)	**$ 67**

Deferred tax assets and liabilities on the consolidated balance sheet represent the tax consequences of differences between the financial reporting and tax basis of assets and liabilities.

Components of Deferred Tax Assets (Liabilities)

	December 31, 2021
Deferred Tax Assets	
Tax basis deferred policy acquisition costs	$ 110
VOBA and reserves	986
Net operating loss carryover	25
Employee benefits	7
Foreign tax credit carryover	16
Net unrealized loss on investments	4
Deferred reinsurance gain	18
Total deferred tax assets	**1,166**
Deferred Tax Liabilities	
Investment related items	(449)
Other	(13)
Total deferred tax liabilities	**(462)**
Net deferred tax asset	**$ 704**

10. Income Taxes (continued)

The statute of limitation is closed through the 2017 tax year with the exception of net operating loss ("NOL") carryforwards utilized in open tax years. Management believes that adequate provision has been made on the consolidated financial statements for any potential adjustments that may result from tax examinations and other tax-related matters for all open tax years. For period ending December 31, 2021, the Company had no reserves for uncertain tax positions. As of December 31, 2021, there was no unrecognized tax benefit that if recognized would affect the effective tax rate and that had a reasonable possibility of significantly increasing or decreasing within the next 12 months.

The Company classifies interest and penalties (if applicable) as income tax expense on the consolidated financial statements. The Company recognized no interest expense for the period July 1, 2021 to December 31, 2021. The Company had no interest payable as of December 31, 2021. The Company does not believe it would be subject to any penalties in any open tax years and, therefore, has not recorded any accrual for penalties.

The Company believes it is more likely than not that all deferred tax assets will be fully realized. In assessing the need for a valuation allowance, management considered future taxable temporary difference reversals, future taxable income exclusive of reversing temporary differences and carryovers, taxable income in open carry back years and other tax planning strategies. From time to time, tax planning strategies could include holding a portion of debt securities with market value losses until recovery, making investments which have specific tax characteristics and business considerations such as asset-liability matching.

Net deferred income taxes include the future tax benefits associated with the net operating loss carryover and foreign tax credit carryover as follows:

Net Operating Loss Carryover

As of December 31, 2021, the net deferred tax asset included the expected tax benefit attributable to net operating losses of $117. Utilization of these loss carryovers is dependent upon the generation of sufficient future taxable income. These losses do not expire, but their utilization in any carryforward year is limited to 80% of taxable income in that year. The loss carryforwards are also subject to Internal Revenue Code Section 382, which may limit the amount that can be utilized in any carryforward year.

Given the Company's expected future earnings, the Company believes sufficient taxable income will be generated in the future to utilize its net operating loss carryover. Although the Company believes there will be sufficient future taxable income to fully recover the remainder of the loss carryover, the Company's estimate of the likely realization may change over time.

Foreign Tax Credit Carryover

As of December 31, 2021, the net deferred tax asset included the expected tax benefit attributable to foreign tax credit carryovers of $16.

11. Commitments and Contingencies

Contingencies Relating to Corporate Litigation and Regulatory Matters

Management evaluates each contingent matter separately. A loss is recorded if probable and reasonably estimable. Management establishes reserves for these contingencies at its "best estimate," or, if no one number within the range of possible losses is more probable than any other, the Company records an estimated liability at the low end of the range of losses.

Litigation

The Company's subsidiaries are involved in claims litigation arising in the ordinary course of business with respect to life and annuity contracts. The Company accounts for such activity through the establishment of reserves for future policy benefits. Management expects that the ultimate liability, if any, with respect to such ordinary-course claims litigation, after consideration of provisions made for potential losses and costs of defense, will not be material to the consolidated financial condition, results of operations or cash flows of the Company.

The Company's subsidiaries are also involved in other kinds of legal actions, some of which assert claims for substantial amounts. Such actions have alleged, for example, bad faith in the handling of insurance claims and improper sales practices in connection with the sale of insurance and investment products. Some of these actions also seek punitive damages. Management expects that the ultimate liability, if any, with respect to such lawsuits, after consideration of provisions made for estimated losses, will not be material to the consolidated financial condition of the Company. Nonetheless, given the large or indeterminate amounts sought in certain of these actions, and the inherent unpredictability of litigation, it is possible that an adverse outcome in certain matters could, from time to time, have a material adverse effect on the Company's consolidated financial condition, results of operations or cash flows in particular quarterly or annual periods.

Lease Commitments

The rent paid for operating leases was $1 for the period of July 1, 2021 to December 31, 2021.

Future Minimum Lease Payments

2022	$	1
2023		1
2024		—
2025		—
2026		—
Thereafter		—
Total minimum lease payments	**$**	**2**

Unfunded Commitments

As of December 31, 2021, the Company had outstanding commitments totaling $705, of which $420 was committed to fund limited partnership and other alternative investments, which may be called by the partnership during the commitment period to fund the purchase of new investments and partnership expenses. Additionally, $45 of the outstanding commitments are primarily related to various funding obligations associated with private debt. The remaining outstanding commitments of $240 are related to mortgage loans. Of the $705 in total outstanding commitments, $155 are related to mortgage loan commitments, which the Company can cancel unconditionally.

Guaranty Fund and Other Insurance-Related Assessments

In all states, insurers licensed to transact certain classes of insurance are required to become members of a guaranty fund. In most states, in the event of the insolvency of an insurer writing any such class of insurance in the state, members of the funds are assessed to pay certain claims of the insolvent insurer. A particular state's fund assesses its members based on their respective written premiums in the state for the classes of insurance in which the insolvent insurer was engaged. Assessments are generally limited for any year to one or two percent of premiums written per year depending on the state.

Liabilities for guaranty funds and other insurance-related assessments are accrued when an assessment is probable, when it can be reasonably estimated, and when the event obligating the Company to pay an imposed or probable assessment has occurred. Liabilities for guaranty funds and other insurance-related assessments are not discounted and are included as part of other liabilities in the Consolidated Balance Sheet. As of December 31, 2021, the liability balance was $4. As of December 31, 2021 amounts related to premium tax offsets of $1, were included in other assets on the Consolidated Balance Sheet.

11. Commitments and Contingencies (continued)

Derivative Commitments

Certain of the Company's derivative agreements contain provisions that are tied to the financial strength ratings, as set by nationally recognized statistical agencies or risked-based capital ("RBC") tests, of the individual legal entity that entered into the derivative agreement. If the legal entity's financial strength were to fall below certain ratings, the counterparties to the derivative agreements could demand immediate and ongoing full collateralization and in certain instances enable the counterparties to terminate the agreements and demand immediate settlement of all outstanding derivative positions traded under each impacted bilateral agreement. The settlement amount is determined by netting the derivative positions transacted under each agreement. If the termination rights were to be exercised by the counterparties, it could impact the legal entity's ability to conduct hedging activities by increasing the associated costs and decreasing the willingness of counterparties to transact with the legal entity. The aggregate fair value of all derivative instruments with credit-risk-related contingent features that were in a net liability position as of December 31, 2021 was $252. Of this $252, the legal entities have posted collateral of $271 in the normal course of business. In addition, the Company did not post any collateral associated with a customized GMWB derivative. This could change as derivative market values change, as a result of changes in our hedging activities or to the extent changes in contractual terms are negotiated. The nature of the collateral that is posted, when required, would be primarily in the form of U.S. Treasury bills, U.S. Treasury notes and government agency securities.

12. Transactions with Affiliates

As of December 31, 2021, the Company had no direct employees as it is managed by TLI, the Company's direct parent, pursuant to an Intercompany Services and Cost Allocation Agreement ("the reimbursement agreement") between the Company, TLI and other Company affiliates. Effective July 1, 2021 the expense reimbursement agreement was modified to reflect a cost-plus reimbursement model. The impact of this revision was not material to the Company.

On October 1, 2021, the Company's direct parent, TLI, acquired Talcott Administration Services Company, LLC ("TASC"), formerly known as Lombard International Administration Services Company, LLC, and LIAS Administration Fee Issuer, LLC ("LAFI") for the purpose of providing insurance administration services and support for banks, corporations, and insurance companies. TASC currently services approximately $42 billion of the Company's separate account assets under administration within the COLI and BOLI markets. Subsequent to the acquisition, the Company's subsidiary TL paid approximately $14 of fees to TASC and received approximately $1 in expense reimbursements from TASC.

13. Statutory Results

Bermuda

TR Re is licensed by the Bermuda Monetary Authority ("BMA") as a Class E long term insurer, subject to the Insurance Act 1978, as amended (the "Bermuda Insurance Act"). The BMA has implemented the Economic Balance Sheet ("EBS") framework into the Bermuda Solvency and Capital Requirement ("BSCR") for commercial insurers, which has been granted equivalency to the European Union's Directive (2009/138/EC) ("Solvency II"). A Class E insurer must produce three sets of financial statements, as follows:

GAAP Financial Statements

Financial statements are required to be prepared in accordance with an internationally recognized comprehensive base of accounting. The GAAP financial statements form the basis for the preparation of the Statutory Financial Statements ("SFS") and the EBS. The Company has elected U.S. GAAP for the GAAP financial statements requirement.

Statutory Financial Statements

The SFS start with the GAAP financial statements and are adjusted for Prudential Filters which include i) non-admitting goodwill, intangible, and other assets that cannot be monetized (but noting that DAC remains an admitted asset); and ii) inclusion of certain assets and liabilities not otherwise recorded under GAAP, for example guarantees the insurer has given that do not relate to the insurer's own insurance contracts. The SFS capital and surplus must meet a minimum required capital amount prescribed as the Minimum Solvency Margin ("MSM").

Economic Balance Sheet

The EBS is a balance sheet where assets are recorded at fair value and policyholder insurance reserves are based on technical provisions comprised of a best estimate liability, plus a risk margin. The best estimate liability may be calculated by applying the standard approach or the scenario approach. Under both approaches, the best estimate of policyholder liability cash flows are used. The discount rate under the standard approach is prescribed by the BMA and updated periodically. Under the scenario approach, the discount rate is based on the yield on eligible assets (generally fixed income-like assets) owned by the insurer as determined under the worst result of nine prescribed stressed scenarios. The statutory economic capital surplus in the EBS must meet a minimum required capital amount prescribed as the Enhanced Capital Requirement ("ECR").

Under the Bermuda Insurance Act, a Class E insurer is required to maintain SFS capital and surplus at least equal to the MSM, which is equal to the greater of $8 or the sum of 2% of the first $500 of statutory assets plus 1.5% of statutory assets in excess of $500. The MSM is floored at 25% of the ECR. The ECR is a risk-based capital calculation used to measure the risk associated with assets and liabilities and premiums of the insurer. The ECR is floored at the MSM.

To enable the BMA to better assess the quality of the insurer's capital resources, a Class E insurer is required to disclose the makeup of its capital in accordance with a 3-tiered capital system. Highest quality capital is classified as Tier 1 Capital, lesser quality capital is classified as either Tier 2 or Tier 3 Capital. The capital supporting the Company's ECR must be at least 50% Tier 1 capital. Additionally, no more than 50% of the Company's ECR can be made up for Tier 2 capital and no more than 17.65% of the aggregate amount of the Company's Tier 1 and Tier 2 capital can be classified as Tier 3 provided that the Tier 2 and Tier 3 capital do not exceed the amount of Tier 1 capital. As of December 31, 2021 all of the Company's eligible capital used to meet the ECR was Tier 1 Capital.

While not specifically referred to in the Bermuda Insurance Act, Target Capital Level ("TCL") is also an important threshold for statutory capital and surplus. TCL is equal to 120% of ECR as calculated pursuant to the BSCR formula. TCL serves as an early warning tool for the BMA. If the Company fails to maintain statutory economic capital and surplus at least equal to the TCL, such failure will likely result in increased regulatory oversight by the BMA.

The following table shows the Company's actual GAAP, SFS, and EBS capital and surplus and net income:

	Year Ended December 31, 2021		
(in millions)	GAAP	SFS	EBS
Actual capital and surplus	$ 2,213	$ 2,086	$ 3,400
Net income (loss)	$ 341	$ 343	N/A

As of December 31, 2021 TR Re had statutory and economic capital in excess of the MSM, ECR and TCL.

13. Statutory Results (continued)

Dividends

Under the Bermuda Insurance Act, the Company is prohibited from paying a dividend in an amount exceeding 25% of the prior year's total statutory capital and surplus, unless at least two members of the Company's board of directors and its principal representative in Bermuda sign and submit an affidavit to the BMA attesting that a dividend in excess of this amount would not cause the Company to fail to meet its relevant margins. In certain instances, the Company would also be required to provide prior notice to the BMA in advance of the payment of dividends. In the event that such an affidavit is submitted to the BMA in accordance with the Bermuda Insurance Act, and further subject to the Company meeting its MMS and ECR, the Company is permitted to distribute up to the sum of 100% of statutory surplus and an amount less than 15% of total statutory capital. Distributions in excess of this amount require the approval of the BMA. As of December 31, 2021, the maximum distribution the Company was permitted to pay without prior approval of the BMA was $606.

The Company did not declare any dividends during 2021.

U.S.

The domestic insurance subsidiaries of the Company prepare their statutory financial statements in conformity with statutory accounting practices prescribed or permitted by the applicable state insurance department which vary materially from U.S. GAAP. Prescribed statutory accounting practices include publications of the National Association of Insurance Commissioners ("NAIC"), as well as state laws, regulations and general administrative rules. The differences between statutory financial statements and financial statements prepared in accordance with U.S. GAAP vary between domestic and foreign jurisdictions. The principal differences are that statutory financial statements do not reflect deferred policy acquisition and value of business acquired costs and limit deferred income taxes, predominately use interest rate and mortality assumptions prescribed by the NAIC for life benefit reserves, generally carry bonds at amortized cost and present reinsurance assets and liabilities net of reinsurance. For reporting purposes, statutory capital and surplus is referred to collectively as "statutory capital".

Statutory Net Loss

	For the Period of July 1, 2021 to December 31, 2021
Combined statutory net loss	$ (426)

Statutory Capital

	December 31, 2021
Statutory capital [1]	$ 2,153

[1] The Company relies upon a prescribed practice allowed by Connecticut state laws that allow the Company to receive a reinsurance reserve credit for reinsurance treaties that provide for a limited right of unilateral cancellation by the reinsurer. The benefit from this prescribed practice was approximately $29 as of December 31, 2021.

Statutory accounting practices do not consolidate the net income (loss) of subsidiaries that report under U.S. GAAP. The combined statutory net income (loss) above represents the total statutory net income (loss) of the Company and its other insurance subsidiaries. Statutory accounting principles require that ceding commissions paid on reinsurance transactions be expensed in the period incurred, affecting statutory net loss, where U.S. GAAP allows for the deferral of these amounts. In addition, as noted in Note 1 - Basis of Presentation and Significant Accounting Policies, the Company's subsidiary paid a $500 dividend associated with the Sixth Street Acquisition. Both items affected statutory capital.

U.S. Risk-Based Capital

The Company's U.S. insurance companies' states of domicile impose RBC requirements. The requirements provide a means of measuring the minimum amount of statutory capital appropriate for an insurance company to support its overall business operations based on its size and risk profile. Regulatory compliance is determined by a ratio of a company's total adjusted capital ("TAC") to its authorized control level RBC ("ACL RBC"). Companies below specific trigger points or ratios are classified within certain levels, each of which requires specified corrective action. The minimum level of TAC before corrective action commences ("Company Action Level") is two times the ACL RBC. The adequacy of a company's capital is determined by the ratio of a company's TAC to its Company Action Level, known as the "RBC ratio". The Company and all of its operating insurance subsidiaries had RBC ratios in excess of the minimum levels required by the applicable insurance regulations. The RBC ratios for the Company and its principal life insurance operating subsidiaries were all in excess of

13. Statutory Results (continued)

300% of their Company Action Levels as of December 31, 2021. The reporting of RBC ratios is not intended for the purpose of ranking any insurance company, or for use in connection with any marketing, advertising or promotional activities.

US Dividend Limitations

As a condition to the Sixth Street Acquisition, the CTDOI requires any dividends from the Company's domestic insurance subsidiaries, for a two-year period following the acquisition, be approved by the state insurance commissioner. Subsequent to this approval condition, dividends to the Company from its insurance subsidiaries and dividends from the Company to its parent are restricted by insurance regulation. The payment of dividends by Connecticut-domiciled insurers is limited under the insurance holding company laws of Connecticut. These laws require notice to and approval by the state insurance commissioner for the declaration or payment of any dividend, which, together with other dividends or distributions made within the preceding twelve months, exceeds the greater of (i) 10% of the insurer’s policyholder surplus as of December 31 of the preceding year or (ii) net income (or net gain from operations, if such company is a life insurance company) for the twelve-month period ending on the thirty-first day of December last preceding, in each case determined under statutory insurance accounting principles. In addition, if any dividend of a domiciled insurer exceeds the insurer’s earned surplus or certain other thresholds as calculated under applicable state insurance law, the dividend requires the prior approval of the domestic regulator. In addition to statutory limitations on paying dividends, the Company also takes other items into consideration when determining dividends from subsidiaries. These considerations include, but are not limited to, expected earnings and capitalization of the subsidiary, regulatory capital requirements and liquidity requirements of the individual operating company.

The Company's domestic insurance subsidiaries had no outstanding dividends declared as of December 31, 2021.

14. Equity

Common Stock

As further discussed in Note 1 -Basis of Presentation and Significant Accounting Policies, on December 30, 2021, in accordance with a reorganization the Company was ultimately contributed from Talcott Financial Group, Ltd. to Talcott Resolution Life, Inc. Pursuant to the reorganization, 250,000 shares of ordinary common stock previously issued to Talcott Financial Group, Ltd. were ultimately contributed to Talcott Resolution Life, Inc. The Company had 250,000 shares of $1 par value ordinary common stock issued and outstanding as of December 31, 2021. All common shares were held by the Company's parent and sole member, Talcott Resolution Life, Inc.

Additional Paid-in Capital

Pursuant to the reorganization above, on December 30, 2021 the Company received $1,883 from its parent, Talcott Resolution Life, Inc., to affect the transfer of ownership of Talcott Resolution Life Insurance Company and subsidiaries.

15. Changes in and Reclassifications From Accumulated Other Comprehensive Income

Changes in AOCI, Net of Tax for the Period of July 1, 2021 to December 31, 2021

16. Revenue from Contracts with Customers

The Company follows the FASB's updated guidance for recognizing revenue from contracts with customers which excludes insurance contracts and financial instruments. Revenue subject to the guidance is recognized when, or as, goods or services are transferred to customers in an amount that reflects the consideration that an entity is expected to receive in exchange for those goods or services.

Revenues from Contracts with Customers

	For the Period of July 1, 2021 to December 31, 2021
Administration and distribution services fees	$ 45

The Company earns revenues from these contracts primarily for administrative and distribution services fees from offering certain fund families as investment options in its variable annuity products. Fees are primarily based on the average daily net asset values of the funds and are recorded in the period in which the services are provided and collected monthly. Fluctuations in domestic and international markets and related investment performance, volume and mix of sales and redemptions of the funds, and other changes to the composition of assets under management are all factors that ultimately have a direct effect on fee income earned.

17. Subsequent Events

The Company has evaluated subsequent events through May 31, 2022, the date the consolidated financial statements were issued.

On February 24, 2022, Russia invaded Ukraine commencing a war between the two countries. As of the date of this report, the depth and length of this war is unknown and is developing rapidly from day to day. The Company had an immaterial direct investment exposure to Russia and no exposure to Ukraine as of December 31, 2021. The majority of those investments matured during the first quarter of 2022 at par. Based on the remaining exposure to Russia, the Company does not expect a material impact on the Company's financial condition and results of operations.
