## SCHEDULE I (Paragraph 4) <br> BERMUDA SOLVENCY CAPITAL REQUIREMENT - CLASS 3A

1. The Class 3A BSCR shall be established, on an EBS Valuation basis, in accordance with the following formula-

$$
B S C R=\sqrt{C_{f i}{ }^{2}+C_{e q}{ }^{2}+C_{\mathrm{int}}{ }^{2}+C_{C u r r}{ }^{2}+{C_{C o n c}}^{2}+C_{\text {prem }}{ }^{2}+\left[\frac{1}{2} C_{c r e d}+C_{r s v s}\right]^{2}+\left[\frac{1}{2} C_{c r e d}\right]^{2}+C_{c a t}{ }^{2}}+C_{o p}+C_{a d j}
$$

$$
+\left(B S C R_{C o r r}-\left(\sqrt{C_{f i}^{2}+C_{e q}{ }^{2}+{C_{\text {int }}}^{2}+C_{C u r r}{ }^{2}+{C_{C o n c}}^{2}+C_{\text {prem }}{ }^{2}+\left[\frac{1}{2} C_{c r e d}+C_{r s v s}\right]^{2}+\left[\frac{1}{2} C_{c r e d}\right]^{2}+C_{c a t}^{2}}+C_{o p}+C_{a d j}\right)\right)
$$

## INSTRUCTIONS AFFECTING TABLE 2: Capital charge factors for Eqastclass $_{i}$

(a) all assets comprising of common stock, preferred stock, real estate, and other miscellaneous investments that are subject to capital charges within the equity investment risk charge shall be included;
(b) all non-affiliated quoted and unquoted common and preferred stock shall be included in the equity investment risk charge;
(c) all common and preferred stock, real estate, and other miscellaneous investments shall be reported on a basis consistent with that used for purposes of statutory financial reporting; and
(d) amounts are to be reported on an EBS Valuation basis.
4. The interest rate / liquidity risk charge calculation shall be established in accordance with the following formula-
$C_{\mathrm{int}}=$ bonds $\times$ duration $\times$ marketdecline where
bonds $\quad=$ quoted and unquoted value of total bonds and debentures, preferred stock, or
duration $=$ the higher of
(a) 1 ; or
(b) the insurer's effective asset duration less the insurer's effective liability duration; or
(c) the insurer's effective liability duration less the insurer's effective asset duration; and not to exceed 3.5
(d) the statement source for effective asset duration and effective liability duration is Schedule V paragraphs (d) and (e), respectively, of these Rules; and marketdecline $=$ assumed interest rate adjustment prescribed in Table 3.

## INSTRUCTIONS AFFECTING TABLE 3: Interest rate adjustment for bonds

(a) all assets comprising of total bonds and debentures, preferred stock, and mortgage loans investments that are subject to capital charges within the interest rate / liquidity risk charge shall be included;
(b) all quoted and unquoted non-affiliated total bonds and debentures and preferred stock shall be included in the interest rate/liquidity risk charge;
(c) all total bonds and debentures, preferred stock, and mortgage loans investments shall be reported on a basis consistent with that used for purposes of statutory financial reporting; and
(d) amounts are to be reported on an EBS Valuation basis.
5. The currency risk charge calculation shall be established in accordance with the following formula-

$$
\begin{aligned}
& C_{\text {Curr }}=\sum_{i} \chi_{i} \times\left(\text { Currproxybscr }_{i}+\text { Currliab }_{i}-\text { Currast }_{i}\right)_{\text {where }-} \\

## INSTRUCTIONS AFFECTING TABLE 4: Capital charge factors for Currency Risk

(a) where the insurer uses currency hedging arrangements to manage its currency risk, then Currast ${ }_{i}$ and Currliab ${ }_{i}$ may reflect the impact of those arrangements on GrossCurrast $_{i}$ and GrossCurrliab ${ }_{i}$ of a $25 \%$ adverse movement in foreign exchange currency rates, otherwise the amounts GrossCurrast $i_{i}$ and GrossCurrliab ${ }_{i}$ shall apply;
(b) any adjustment to reflect currency hedging arrangements shall not apply to the calculation of Currproxybscr ${ }_{i}$;
(c) "currency hedging arrangements" means derivative or other risk mitigation arrangements designed to reduce losses due to foreign currency exchange movements, and which meet the Authority's requirements to be classed as such;

## INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024

(d) insurers are to report currencies representing at least 95\% of their economic balance sheet liabilities; and
(e) amounts are to be reported on an EBS Valuation basis.
6. The concentration risk charge calculation shall be established in accordance with the following formula-

$$
C_{\text {Conc }}=\sum_{i} \chi_{i} \times \text { Concastclass }_{i} \text { where }
$$

$\chi_{i} \quad=$ the capital charge factors prescribed in Table 5 for each type of Concastclass $_{i}$ and

## INSTRUCTIONS AFFECTING TABLE 5: Capital charge factors for Concastclass $_{i}$

(a) Concastclass ${ }_{i}$ shall only apply to the insurers 10 largest counterparty exposures based on the aggregate of all instruments included in Table 5 related to that counterparty
(b) a counterparty shall include all related/connected counterparties defined as:
(i) control relationship: if the counterparty, directly or indirectly, has control over the other(s); or
(ii) economic interdependence: if one of the counterparties were to experience financial problems, in particular funding or repayment difficulties, the other(s) as a result, would also be likely to encounter funding or repayment difficulties; and
(c) amounts are to be reported on an EBS Valuation basis.
7. The premium risk charge calculation shall be established in accordance with the following formula-

$$

## INSTRUCTIONS AFFECTING TABLE 9B

The total score is derived by adding the score for each criterion of an insurer's risk management function that the insurer has implemented.
12. The regulatory capital requirement for regulated non-insurance financial operating entities shall be determined in accordance with Schedule XVI - "Schedule of Regulated Non-Insurance Financial Operating Entities". This amount shall be equal to the sum of the insurer's proportionate share of each entity's regulatory capital requirement in accordance with the applicable solvency laws of the jurisdiction where the entity is licensed or registered.
13. The $B S C R_{\text {Corr }}$ shall be established on an economic balance sheet (EBS) valuation basis in accordance with the following formula-

$$
B S C R_{\text {Corr }}=\text { Basic BSCR }+C_{\text {operational }}+C_{\text {regulatoryadj }}+C_{\text {otheradj }}+C_{\text {AdjTP }} ;

## INSTRUCTIONS AFFECTING TABLE 2B: Shocks for Eqastclass $_{i}$

(a) all assets (except regulated non-insurance financial operating entities) and liabilities (except the risk margin) whose value is subject to equity risk shocks are to be reported on a basis consistent with that used for the purposes of economic balance sheet reporting. Such assets and liabilities shall include equity risk exposures determined by application of the "look-through" approach calculated in accordance with criteria prescribed by the Authority for the following items:
(i) collective investment vehicles and other investments packaged as funds, including related undertakings used as investment vehicles;
(ii) segregated accounts assets and liabilities;
(iii) deposit asset and liabilities;
(iv) assets and liabilities held by ceding insurers or under retrocession;
(v) other sundry assets and liabilities; and
(vi) derivatives.
(b) for asset types referred to in paragraph (a) (i) to (vi) where the "look through" approach cannot be applied, the residual balance shall be included in "Equity Securities - Other Investments";
(c) short exposures qualifying as assets held for risk-mitigation purposes and short exposures not qualifying as assets held for risk-mitigation purposes, shall both be determined in accordance with criteria prescribed by the Authority; and
(d) amounts are to be reported on an EBS Valuation basis.
20. The interest rate and liquidity risk charge calculation may be calculated in accordance with paragraph 4 or the formula below. Where an insurer decides to utilise the formula below, it will only be allowed to revert back and utilise the calculations prescribed in paragraph 4 where it has received the written approval of the Authority pursuant to an application made in accordance with section 6D of the Act.

## INSTRUCTIONS AFFECTING TABLE 3B: Shock Vectors for Interest rate - Liquidity

(a) all assets sensitive to interest rates shall be included in the table, including but not limited to fixed income assets, hybrid instruments, deposits, loans (including mortgage and policyholder loans), reinsurance balance receivables and exposures as determined by application of the "look-through" approach calculated in accordance with criteria prescribed by the Authority for the following items:
(i) collective investment vehicles and other investments packaged as funds, including related undertakings used as investment vehicles;
(ii) segregated accounts assets;
(iii) deposit asset;
(iv) other sundry;
(v) derivatives; and
(vi) funds held by ceding insurers.
(b) all liabilities sensitive to interest rates shall be included in the table, including but not limited to best estimate of insurance liabilities, other liabilities (except risk margin) and liability exposures determined by application of the "look-through" approach calculated in accordance with the criteria prescribed by the Authority for the following items:
(i) segregated accounts liabilities;
(ii) deposit liabilities;
(iii) other sundry liabilities;
(iv) derivatives; and
(v) funds held under retrocession.
(c) amounts are to be reported on an EBS Valuation basis.
21. The currency risk charge calculation shall be established in accordance with the following formula-

$$

## INSTRUCTIONS AFFECTING TABLE 4A: Shock factors for Currency Risk

(a) The initials "A" to " J " on the column labeled "Shock Otherwise $\chi_{i}$ " shall be replaced by the following shock values:

- "A" by:
" $0 \%$ " if the reporting currency is the Bermuda Dollar or,
- " $5.00 \%$ " if the reporting currency is the Qatari Riyal or,
- " $1.00 \%$ " if the reporting currency is the Hong Kong Dollar or,
" $25 \%$ " otherwise.
- "B" by:
" $0 \%$ " if the reporting currency is the United States Dollar or,
" $25 \%$ " otherwise.
- "C" by:
" $5.00 \%$ " if the reporting currency is the United States Dollar or,
- "25\%" otherwise.
- "D" by:
" $1.00 \%$ " if reporting currency is the United States Dollar or,
" $25 \%$ " otherwise.
- "E" by:
" $0.39 \%$ " if the reporting currency is the Danish Krone or
" $1.81 \%$ " if the reporting currency is the Bulgarian Lev or,
" $2.18 \%$ " if the reporting currency is the West African CFA Franc or,
" $1.96 \%$ " if the reporting currency is the Central African CFA Franc or,
" $2.00 \%$ " if the reporting currency is the Comorian Franc or,
" $25 \%$ " otherwise.
- "F" by:
" $0.39 \%$ " if reporting currency is the Euro or,
" $25 \%$ " otherwise.
- "G" by:
" $1.81 \%$ " if reporting currency is the Euro or,
" $25 \%$ " otherwise.
- "H" by:
" $2.18 \%$ " if reporting currency is the Euro or,
" $25 \%$ " otherwise.
- "I" by:
" $1.96 \%$ " if reporting currency is the Euro or, " $25 \%$ " otherwise.
- "J" by:
" $2.00 \%$ " if reporting currency is the Euro or, "25\%" otherwise.

INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024
(b) all assets and liabilities (except the risk margin) whose value is subject to currency risk shocks shall be reported on a basis consistent with that used for purposes of economic balance sheet reporting. These assets and liabilities shall include currency risk exposures determined by application of the "look-through approach" calculated in accordance with criteria prescribed by the Authority for the following items:
(i) collective investment vehicles and other investments packaged as funds, including related undertakings used as investment vehicles;
(ii) segregated accounts assets and liabilities;
(iii) deposit asset and liabilities;
(iv) assets and liabilities held by ceding insurers or under retrocession;
(v) other sundry assets and liabilities; and
(vi) derivatives.
(c) where the reporting currency is the United States Dollar, the capital factor $\chi_{i}$ charge shall be reduced to:
i. $0.00 \%$ for the Bermuda Dollar;
ii. $5.00 \%$ for the Qatari Riyal;
iii. $1.00 \%$ for the Hong Kong Dollar.
(d) where the reporting currency is the Bermuda Dollar the capital factor $\chi_{i}$ charge shall be reduced to $0.00 \%$ for the United States Dollar.
(e) where the reporting currency is the Qatari Riyal the capital factor $\chi_{i}$ charge shall be reduced to 5.00\% for the United States Dollar.
(f) where the reporting currency is the Hong Kong Dollar the capital factor $\chi_{i}$ charge shall be reduced to $1.00 \%$ for the United States Dollar.
(g) where the reporting currency is Euros, the capital factor $\chi_{i}$ shall be reduced to:
i. $0.39 \%$ for the Danish Krone;
ii. $\quad 1.81 \%$ for the Bulgarian Lev;
iii. $2.18 \%$ for the West African CFA Franc;
iv. $1.96 \%$ for the Central African CFA Franc;
v. $2.00 \%$ for the Comorian Franc.
(h) where the reporting currency is the Danish Krone the capital factor $\chi_{i}$ charge shall be reduced to 0.39\% for the Euro.
(i) where the reporting currency is the Bulgarian Lev the capital factor $\chi_{i}$ charge shall be reduced to $1.81 \%$ for the Euro.
(j) where the reporting currency is the West African CFA Franc the capital factor $\chi_{i}$ charge shall be reduced to $2.18 \%$ for the Euro.
(k) where the reporting currency is the Central African CFA Franc the capital factor $\chi_{i}$ charge shall be reduced to $1.96 \%$ for the Euro.
(1) where the reporting currency is the Comorian Franc the capital factor $\chi_{i}$ charge shall be reduced to $2.00 \%$ for the Euro.

## INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024

(m) insurers are to report currencies representing at least $95 \%$ of their economic balance sheet liabilities; and
(n) amounts are to be reported on an EBS Valuation basis.
22. The concentration risk charge calculation shall be determined in accordance with the following formula-

Where-
$\chi_{i} \quad=$ the capital charge factors prescribed in Table 5A for each type of Concastclass $_{i}$ and
Concastclass $_{i}=$ the value of the corresponding asset prescribed in Table 5A, for each type of Asset Class.

## 

(a) Concastclass ${ }_{i}$ shall only apply to an insurers' ten largest counterparty exposures based on the aggregate of all assets set out in the in Table 5A relating to that counterparty;
(b) for the purposes of Table 5A, a counterparty exposure shall be reported on the valuation of individually underlying assets i.e. determined by application of the "look through" approach in accordance with criteria prescribed by the Authority for all amounts reported on the balance sheet;
(c) for the purposes of Table 5A, a counterparty shall include all related or connected counterparties captured by either of the following criteria:
(i) controller relationship: if a counterparty, directly or indirectly, has control of (as a result of its majority shareholding in or effective management) which it is a subsidiary company; or
(ii) economic interdependence: if one of the counterparties were to experience financial difficulties which directly or indirectly affect the ability of any or all of the remaining counterparties to perform their financial obligations (for example where a counterparty becomes unable to fund or repay certain financial contractual obligations, and as a result, other counterparties, are likely to be unable to fund or repay certain obligations imposed on them);
(a) amounts are to be reported on an EBS Valuation basis.
23. The premium risk charge calculation shall be established in accordance with the following formula-
$C_{\text {Premium }}=\sqrt{\sum_{i, j} \operatorname{CorrPrem}_{i, j} \times C_{i} \times C_{j}}-\left[\left[\sum_{i} C_{i}\right] \times[\varepsilon \times \mu]\right] ;$

## INSTRUCTIONS AFFECTING TABLE 6C: Capital charge factors for Premium Risk

(a) all reported net premium exposure measures as prescribed in Schedule IVD that are subject to capital charges within the premium risk charge shall be included;
(b) "qualifying multi-year insurance policies" means those insurance policies with a term longer than twelve months after allowing for the criteria prescribed by the Authority;
(c) all net premium exposure measures by statutory Line of Business shall be reported on a basis consistent with that prescribed in Schedule IVD;
(d) an insurer may provide net premium exposure measures for all statutory Lines of General Business, or for particular statutory Lines of General Business, split by geographic zone as set out in Table 6D. geolineprem ${ }_{i}$ is then derived from the total premium for that Line of Business by reducing the total by $25 \%$ times $\frac{\sum x_{i}^{2}}{\left(\sum x_{i}\right)^{2}}$ where $x_{i}=$ the net premium exposure measure in the Line of Business for Zone $_{i}$; and where the summation covers all zones; and
(e) amounts are to be reported on a consolidated basis.

## INSTRUCTIONS AFFECTING TABLE 8A: Capital charge factors for debtor $_{i}$

(a) all accounts and premiums receivable and all other receivables that are subject to capital charges within the credit risk charge shall be included;
(b) all accounts and premiums receivable, reinsurance balances receivables, all other receivables, and reinsurance recoverable balances shall be reported on a basis consistent with that used for purposes of statutory financial reporting;
(c) "collateralized balances" for the purposes of this paragraph shall mean assets pledged in favor of the insurer relating to accounts and premiums receivable under Table 8A - Capital charge factors for debtor $_{i}$;
(d) Particulars of reinsurance balances shall be the greater of paragraphs (i) and (ii) below
(i) Particulars of reinsurance balances for current year by BSCR rating are as follows:
(A) the net qualifying exposure which is comprised of reinsurance balances receivable and reinsurance balances recoverable, less the corresponding reinsurance balances payable and other payables less the qualifying collateral issued in favor of the insurer in relation to the reinsurance balances;
(B) the "net qualifying exposure" referenced in paragraph (d)(i)(A) above shall be subject to the prescribed credit risk capital factor under Table 8A;
(C) the total capital requirement relating to the reinsurance balances shall be reduced by a diversification adjustment of up to a maximum of $40 \%$;
(D) the "diversification" adjustment" referenced in paragraph (d)(i)(C) above shall be determined by calculating $40 \%$ multiplied by 1 minus the ratio of the largest net reinsurance exposure, on an individual reinsurer basis, to total net reinsurance exposure;
(ii) Particulars of reinsurance balances for future premium by BSCR rating are as follows:
(A) the Premium Risk Capital Charge (Gross), as prescribed in paragraph (d)(ii)(B) below less the Premium Risk Capital Charge (Net), as prescribed in paragraph 23, shall be referred to as "Premium Risk Capital Charge (Ceded)". Such amount shall be allocated to the type of debtor ( debtor $_{i}$ ) by BSCR rating Net Qualifying Exposure Measure as reported on Schedule XVIII;
(B) the Premium Risk Capital Charge (Gross) is calculated in the same manner as Premium Risk Capital Charge (Net) using the Gross Premium Exposure Measure (Schedule IVD, Column G) rather than the Net Premium Exposure Measure (Schedule IVD, Column F) as the input ExposureMeasure $_{i}$ parameter in paragraph 24. ExposureMeasure $_{i}$ is allocated to BaseExp $_{i}$, FPExisting $_{i}$ and FPFuture $e_{i}$ for the Premium Risk Capital Charge (Gross) calculation in the same proportions as in the Premium Risk Capital Charge (Net) calculation;
(C) the Premium Risk Capital Charge (Ceded) shall be subject to the prescribed credit risk capital charge factor under Table 8A;
(D) the total capital requirement relating to the reinsurance balances shall be reduced by a diversification adjustment of up to a maximum of $40 \%$; and
(E) the "diversification" adjustment" referenced in paragraph (d)(i)(C) above shall be determined by calculating $40 \%$ multiplied by 1 minus the ratio of the largest net reinsurance exposure, on an individual reinsurer basis, to total net reinsurance exposure; and
(e) amounts are to be reported on an EBS Valuation basis

INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024

SCHEDULE OF RISK MANAGEMENT
The schedule of risk management shall disclose the Class 3 A insurer's risk management program as follows-
(a) governance and group structure;
(b) ten largest exposures to counterparties and any other counterparty exposures exceeding $10 \%$ of the insurer's statutory capital and surplus;
(c) revoked;
(d) effective duration of assets;
(e) effective duration of liabilities;
(f) gross probable maximum loss (if property catastrophe writer);
(g) net probable maximum loss (if property catastrophe writer)
(h) average annual loss (if property catastrophe writer);
(i) actual attritional losses and large claims losses in the relevant year;
(j) arrangements with respect to property catastrophe recoverables;
(k) mutual fund disclosures;
(1) summary of projected performance;
(m) financial impact and description of stress and scenario tests;
(n) list of statutory lines and statutory territories that have catastrophe exposures;
(o) reconciliation from GAAP financial statements to Form 1EBS;
(p) revoked;
(q) revoked;
(r) revoked;
(s) details of deposit assets and liabilities;
( t ) details of segregated accounts;
(u) alternative capital arrangements.
(v) net probable maximum loss arising from acts of terrorism;
(w) net probable maximum loss arising from the Aviation and Aviation nonproportional statutory lines of general business;
(x) net probable maximum loss arising from the insurance of sea, lake, river and canal vessels;
(y) net probable maximum loss arising from the insurance of oil and gas offshore platforms;
(z) net probable maximum loss arising from mortgage insurance;
(aa) net probable maximum loss arising from surety insurance;
(bb) amount of reinsurance recoverable under the specified trade credit insurance stress scenario;
(cc) insurer's trade credit gross premium estimate earned over the next 12 months relating to investment grade exposures only;
(dd) insurer's trade credit gross premium estimate earned over the next 12 months relating to non-investment grade exposures only;
(ee) net probable maximum credit and surety loss arising from the default of direct and proportional credit insurance exposures;
(ff) net probable maximum credit and surety loss arising from a recession;
(gg) amount of reinsurance recoverable under the specified credit and surety insurance stress scenario; and
(hh)insurer's Credit/surety (statutory line of business) non-proportional gross premium estimate earned over the next 12 months only.

## INSTRUCTIONS AFFECTING SCHEDULE V:

Paragraphs ( f ) ( g ), ( p ), (q) and (r) are to be reported on both an EBS Valuation basis and an unconsolidated basis. All other requirements are to be reported on an EBS Valuation basis only.
(a) "governance and group structure" must disclose (on a legal entity and group basis where applicable -
(i) the structure of the board of directors including names, role, residence and work experience;
(ii) the structure of the management of the insurer, including names, roles, work experience, employee arrangement (for example, confirm whether employees are hired or outsourced, etc.) and description of responsibilities of the chief and senior executive;
(iii) terms of reference of the board of directors and its sub-committees;
(iv) the jurisdiction(s) where the board of directors of the insurer primarily deliberates on activities including but not limited to-
(A) setting the strategic direction of the insurer;
(B) determining the (re)insurer's risk appetite;
(C) choosing new lines of business, new products, and market position;
(D) assessing solvency needs;
(v) details of every service provider of the insurer, including name, jurisdiction of incorporation, and details of the insurer's operations, which are primarily being performed in relation to the jurisdiction(s) where the board of directors of the insurer primarily deliberates on activities including but not limited to-
(A) underwriting (re)insurance policies;
(B) risk management decisions and activities;
(C) investment decisions;
(D) actuarial functions;
(E) compliance audit;
(F) internal audit;
(vi) number of employees resident in Bermuda (non-outsourced positions);
(vii) the jurisdiction(s) where the parent board primarily deliberates on matters including but not limited to -
(A) setting strategic decision;
(B) determining the group's risk appetite;
(C) choice of corporate structure, including amalgamations, acquisitions and strategic alliances;
(D) choice of new lines of business, new products, marketplace positioning;
(E) assessing solvency needs;
(viii) the jurisdictions where the parent board and chief and senior executives primarily reside;
(ix) the jurisdiction where the insurance group's central control functions reside (i.e. group finance, actuarial, and risk management);
(x) the insurance group's financial position based on its most recent audited general purpose financial statement regarding its-
(A) total assets;
(B) total reserves; and
(C) capital and surplus;
(xi) name of reinsurers within the insurance group that have the highest -
(A) total assets value;
(B) total insurance reserves value; and
(C) total capital and surplus based on the group's most recent audited general purpose financial statement;
(xii) the total values for subparagraph (xi)(A), (B) and (C);
(xiii) the jurisdiction of incorporation of each reinsurer in subparagraph (xi);
(xiv) any events which have occurred or decisions made subsequent to the relevant year-end that would materially change, or have materially changed, the information in subparagraphs (iv) through (xiii) (e.g. amalgamation or acquisition or restructuring, etc.); provide a detailed response and explanation;
(xv) a copy of the latest group organisational chart.
(b) intra-group transactions that the insurer is a party to and the insurer's risk concentrations shall include-
(i) details of material intra-group transactions between the insurer and other members of the group for which it belongs, including (where applicable)-
(A) exposure value (face value or market value, if the latter is available);

(d) "effective duration of assets" must be determined using the aggregate of the bonds and debentures (as reflected in Form1EBS, Lines $2(\mathrm{~b})$ and 3(b)), preferred stock (as reflected in Form 1EBS, Lines 2(c)(ii) and 3(c)(ii)), and mortgage loans portfolios (as reflected in Form 1EBS, Line 5(c)) as a basis;
(e) "effective duration of liabilities" must be determined using the reserves (as reflected in Form 1EBS, Lines $17 \& 18$ ) as a basis;
(f) "gross probable maximum loss (if property catastrophe writer)" means the gross probable maximum loss for natural catastrophe losses (prior to reinsurance) must be calculated at the $99.0 \%$ Tail Value-at-Risk level for annual aggregate exposure to all property related risks and all perils (for the property cat line only), including reinstatement premiums for the year following the relevant year based upon the insurer's catastrophe model. The support documentation must be retained for at least five years once a capital and solvency return has been filed in accordance with paragraph 6 at the registered office of the insurer and shall be presented to the Authority upon request;
(g) "net probable maximum loss (if property catastrophe writer)" means the net probable maximum loss for natural catastrophe losses (after reinsurance) at the $99.0 \%$ Tail Value-at-Risk level for annual aggregate exposure to all property related risks and all perils (for the property cat line only), including reinstatement premiums for the year following the relevant year based on the insurer's catastrophe model. The support documentation must be retained for at least five years once a capital and solvency return has been filed in accordance with paragraph 6 at the registered office of the insurer and shall be presented to the Authority upon request
(h) "average annual loss (if property catastrophe writer)" means-
(i) the expected net natural catastrophe loss (after reinsurance), including reinstatement premiums, for annual aggregate exposure to all property related risks and all perils (for the property cat line only) for the year following the relevant year based on the insurer's catastrophe model;
(ii) the calculation should be from the same underlying loss distribution used to determine the gross probable maximum loss and the net probable maximum loss; and
(iii) the support documentation must be retained for at least 5 years once a capital and solvency return has been filed in accordance with paragraph 6 at the registered office of the insurer and shall be presented to the Authority upon request;
(i) "actual attritional losses and large claim losses - relevant year" means the actual aggregate losses (classified by insurers as attritional and large claim losses in accordance with its own policy) experienced by the insurer in the relevant year
(not including prior year reserve releases, catastrophic losses or adverse development);
(j) the arrangements with respect to property catastrophe recoverables shall disclose the amounts of-
(i) collateral;
(ii) catastrophe bonds;
(iii) special purpose insurer (indemnity basis);
(iv) special purpose insurer (other basis); and
(v) total
(k) mutual fund disclosures shall include the name, type and amount of each mutual fund (as reflected in Form 1EBS Schedule, Lines 2(b), 2(c)(iii), 3(a), and 3(c)(iii)) that were used by the insurer -
(1) the summary of projected performance by the insurer for the year following the relevant year shall disclose -
(i) the insurer's latest estimate of annual net premiums written;
(ii) the estimated underwriting profit or loss; and
(iii) the estimated net income or loss for the insurer or on a group basis with disclosure of the estimated percentage of the insurer's contribution relative to the group.
(m) the financial impact and description of stress and scenario tests shall disclose the results from the stress and scenario tests prescribed by the Authority annually and published in such manner as the Authority directs;

(s) In respect of business for which deposit accounting approaches have been followed: a description of business, total assets held in trust or other collateral, lines of business written, gross premiums written for the period, net premiums written for the period, limits (maximum exposure). For business that has limited exposure, provide the results at a $99.0 \%$ TVaR, and for business with unlimited exposure, provide details of such business;
(t) in respect of segregated account business, details of each by net loss reserves by statutory lines of business: segregated account cell name, total assets, total liabilities, statutory capital and surplus, cash and investments, net loss reserves, reinsurance recoverable, statutory lines of business written, gross premium written, net premium written, currency, details if the insurance or re-insurance contract has limited recourse language, details of inter-relationship between segregated account cells (if any), details of the segregated account cell's access to the general account (if any) and details where a segregated account cell is in a deficit, insolvent or subject to litigation; and
(u) an insurer funded by alternative capital arrangements shall provide the following information in relation to all contracts of insurance which were in force and for which the insurer was required to hold collateral during its relevant financial year-
(i) name of the insured;
(ii) insurance contract reference number;
(iii) type of insurance coverage written;
(iv) statutory line of business written;
(v) location of exposure covered;
(vi) aggregate maximum limit as at the inception date of the contract of insurance;
(vii) net aggregate maximum limit as at the end of the insurer's financial year;
(viii) inception date of coverage period;
(ix) effective date of contract;
(x) expiry date of coverage period;
(xi) gross premium written for the coverage period;
(xii) net premium written for the coverage period;
(xiii) attachment point;
(xiv) aggregate losses outstanding at the beginning of the insurer's financial year;
(xv) aggregate losses incurred during the insurer's financial year;
(xvi) aggregate losses outstanding at the end of the insurer's financial year;
(xvii) reserved buffer collateral;
(xviii) currency of exposure;
(xix) nature of collateral;
(xx) average collateral rating;
(xxi) amount of collateral at the end of the insurer's financial year; and
(xxii) any additional comments to assist the Authority in understanding any of the information provided under the preceding subparagraphs.
(v) for the purposes of paragraph (u)-
"alternative capital" means capital provided by an alternative capital provider for the purposes of collateralizing an insurer against contract of insurance losses;
"alternative capital provider" means a person providing capital to an insurer in which the person has no ownership
(w) the net probable maximum loss arising from acts of terrorism must be calculated as the sum insured for the largest building concentration after the deduction of amounts
recoverable from outwards reinsurance arrangements, covering property and content damage due to fire or explosion, including as a result of terrorist attacks.

When calculating the net probable maximum loss arising from acts of terrorism, the measure of concentration of exposure to be taken into account are buildings that are fully or partially covered within a radius of 200 metres. Such concentration may occur over one or multiple insurance contracts;
(x) the net probable maximum loss arising from the Aviation and Aviation non-proportional statutory lines of general business shall be calculated as the single largest aircraft sum insured across both hull and liability perils, net of the amounts recoverable from any outwards reinsurance arrangements;
(y) the net probable maximum loss arising from the insurance of sea, lake, river and canal vessels shall be calculated as he maximum sum insured for a single vessel across the hull, liability and pollution exposures, net of the amounts recoverable from any outwards reinsurance arrangements;

The net probable maximum loss arising from the insurance of oil and gas offshore platforms shall be calculated as the maximum sum insured for a single (oil or gas) platform, net of the amounts recoverable from any outwards reinsurance arrangements. It should also include the sum insured for compensation for property damage, wreckage removal, loss of production, capping and securing the well and liability obligations;
(z) the net probable maximum loss arising from mortgage insurance shall be calculated as the average net (of the amounts recoverable from any outwards reinsurance arrangements) annual loss resulting from an increase in the frequency of delinquency, defaults and loss severity that results from a $25 \%$ decline in home prices;
(aa) the net probable maximum loss arising from surety insurance shall be calculated as the sum of the two largest net of co-surety, cash collateral in custody and amounts recoverable from any outwards reinsurance arrangements, losses arising from two separate surety counterparties (principals).

For the purposes of calculating the net probable maximum loss, gross loss to exposure ratios should be calibrated at the $90^{\text {th }}$ percentile for US exposures and $95^{\text {th }}$ percentile for non-US exposures and should be applied to the insurer's largest individual surety counterparties exposures in order to identify the two largest net losses;
(bb) the amount of reinsurance recoverable under the specified trade credit insurance stress scenario shall be calculated as the amounts recoverable from any outwards reinsurance arrangements for the assumed gross trade credit stress loss $\left(T C_{G R}\right)$ as defined in paragraph 37 of Schedule I;
(cc) the insurer's trade credit gross premium estimate earned over the next 12 months relating to investment grade exposures only shall be calculated as the trade credit premium that is expected to be earned over the next 12 months for which the counterparty to the policyholder has a credit rating of investment grade or above;
(dd) the insurer's trade credit gross premium estimate earned over the next 12 months relating to non-investment grade shall be calculated as the trade credit premium the insurer expects to earn over the next 12 months for which the counterparty to the policyholder has a credit rating of below investment grade;
(ee) the net probable maximum Credit/surety (statutory line of business) loss arising from the default of credit insurance exposures shall be calculated as the loss that would arise from an immediate default of the two largest credit insurance exposures. This calculation should take into account that:
(i) the assumption is made that the loss-given-default, before the deduction of the amounts recoverable from any outwards reinsurance arrangements, of each credit insurance exposure is $10 \%$ of the sum insured in relation to the exposure; and
(ii) the determination of the two largest credit insurance exposures of the insurance or reinsurance undertaking is based on a comparison of the net loss-given-default of the credit insurance exposures, where the loss-given default is after deduction of the amounts recoverable from any outwards reinsurance arrangements; and
(iii) direct and proportional credit and surety (Credit/surety statutory line of business) exposures only has been considered;
(ff) the net probable maximum Credit/surety (statutory line of business) loss arising from a recession shall be equal to the loss that would result from an instantaneous loss of an amount that, before the deduction of the amounts recoverable from any outwards reinsurance arrangements, is equal to $100 \%$ of the Credit/surety statutory line of business premiums earned during the following 12 months. The estimated loss should be net of the amounts recoverable from any outwards reinsurance arrangements;
(gg) the amount of reinsurance recoverable under the specified Credit/surety nonproportional (statutory line of business) stress scenario $m$-shall be the amounts recoverable, from any outwards reinsurance arrangements, for the assumed gross stress loss for non-proportional credit and surety ( $C \& S_{n p-G r}$ ) as defined in paragraph 37;
(hh)the insurer's Credit/surety non- proportional (statutory line of business) gross premium estimate earned over the next 12 months only - shall be input as the Credit/surety non-proportional (statutory line of business) premium the insurer expects to earn over the next 12 months.

## LOSS RESERVE SPECIALIST'S OPINION

1 The loss reserve specialist's Opinion must state whether or not, in the opinion of the loss reserve specialist, the aggregate amount of technical provisions shown at Line 19 in the Statutory Economic Balance Sheet as at the end of the relevant financial year:
(a) meets the requirements of the Insurance Act 1978 and related rules and regulations;
(b) makes reasonable provision for the total technical provisions of the group under the terms of its insurance contracts and agreements.

2 The loss reserve specialist shall state their own best estimates (and/or ranges for the best estimates) and confirm that such estimates have been determined in accordance with the requirements set out in Schedule XIV. The loss reserve specialist shall also state (but is not limited to) their best estimates for following matters (as applicable):
(a) Line 16(a)
(b) Line 16(d)
(c) Line 17(a)
(d) Line 17(d)

4 In relation to Lines $16(a)$, the loss reserve specialist shall provide commentary on the assumptions made in relation to Bound But Not Incepted business, as described in paragraph $28(6)$ to (8) inclusive of the Economic Balance Sheet valuation principles as set out in Schedule XXVI.

The loss reserve specialist shall provide commentary for Lines $16(\mathrm{~d})$ and $17(\mathrm{~d})$ on the assumptions made for expected losses due to counterparty default (for whatever reason, including reinsurer insolvency or contractual dispute) in relation to reinsurance recoveries.

6 Where the loss reserve specialist has not used risk discount curves provided by the Authority they shall state the rates used for calculation and provide commentary on how they were derived.

7 The loss reserve specialist shall provide commentary on any aspects of the technical provisions of the insurer which give rise to greater levels of uncertainty than would typically be associated with the insurer's business.

The loss reserve specialist Opinion shall further confirm:
(a) the loss reserve specialist's name, employer and professional designations attained (which qualifies them to issue the opinion and formed the basis for their application to the Authority for approval as Loss Reserve Specialist) ;
(b) whether or not the loss reserve specialist continues to be a qualified member in good standing of all official actuarial bodies included in their application to the Authority for approval;
(c) whether or not the loss reserve specialist is in full compliance with the most recent Continuing Professional Development requirements of their official actuarial body;
(d) whether or not the loss reserve specialist has any perceived conflicts of interest relative to providing the opinion; and
(e) whether or not the work supporting the Opinion complies with applicable standards of actuarial practice.

9 Working papers supporting the loss reserve specialist's Opinion are required to be made available to the Authority by the loss reserve specialist upon request and should be sufficient in and of themselves to enable the completion of an independent review of the Opinion and supporting analysis by another unrelated but experienced actuary.

The Opinion shall be signed and dated by the loss reserve specialist and must include their current contact information, including but not limited to, telephone number and email address.

## SCHEDULE XXV

## SCHEDULE OF ADJUSTMENTS

1. An insurer may make an application to the Authority in accordance with section $6 \mathrm{D}(7)$ of the Act, to request for any of the following adjustments, as applicable, to be made to the insurer's enhanced capital requirement, available statutory capital and surplus, total statutory capital and surplus or available statutory economic capital and surplus, and any adjustment approved by the Authority shall take effect on the date determined by the Authority:
(a) to allow for the recognition of material limits and other risk mitigation techniques when not adequately captured by the insurer's ECR calculation;
(b) to modify the BSCR premium risk and reserve risk capital charge factors for general business;
(c) to allow for deductions of premiums derived from an acquisition of legacy insurance reserves from the BSCR premium risk calculation for general business;
(d) to set the TransitionalFactor or Transitional mmcat $^{\prime}$ ' of the BSCR calculation to $100 \%$;
(e) to allow the use of alternative credit ratings for determining the BSCR Ratings within the BSCR calculation;
(f) to assess correct classification of specific assets or liabilities;
(g) to adjust the insurance reserves; and
(h) to modify the calculation of the minimum margin of solvency requirement.
2. The Authority may request an insurer to provide it with any information and documents required in order to appropriately assess an application made to it by an insurer under paragraph 1.
3. In reviewing an application for an adjustment by an insurer under paragraph 1, the Authority shall take into consideration the nature, scale, risk profile and complexity of the insurer's business.
4. Further consideration may be made by the Authority to the following matters, which include but are not limited to the following:
(a) materiality of the adjustment;
(b) scope and reasoning for the adjustment;
(c) quality of supporting analysis provided;
(d) data completeness, accuracy and appropriateness;
(e) consistency in the design, assumptions, methodologies and calibration of the BSCR;
(f) solvency position of the insurer pre and post the proposed adjustment;
(g) appropriateness and suitability of the methodologies utilised in preparing the adjustment requested (for example calibration and statistical analysis applied);
(h) validation and documentation;
(i) governance and risk management requirements of the insurer and whether such aligns with the proposed adjustment;
(j) governance relating to the production, review and use of the proposed adjustment;
(k) adjustments already granted to the insurer; and
(1) the extent to which the model underpinning the proposed adjustment is used in and plays an important role in the insurer's system of governance.
5. Where an application for approval has been granted by the Authority under section 6 D (7) prior to 31 December 2023, insurers shall apply the following calculations to any transitional arrangements agreed by the Authority at the time the application was granted. For an insurer with a liability duration of:
(a) < (less than) 5 years, a five-year transition will apply; and
(b) $>=$ (greater than or equal to) 5 years, a transition period equal to the insurers' liability duration will apply up to ten years.
6. The Authority, at its discretion, may approve applications under subsection $6 \mathrm{D}(7)$ for adjustments outside the scope set out in paragraph 1 . The conditions that apply to adjustments made under paragraph 1 will also apply to adjustments made under this paragraph. Additionally :
(a) in determining whether to approve such applications, the Authority will also consider the extent to which the scope of the proposed adjustment overlaps with the scope of the adjustments listed in paragraph 1 ; and
(b) where an approval is granted by the Authority to adjust an insurer's ECR with an adjustment that does not fall under the adjustments listed under paragraph 1, a floor equal to $90 \%$ of the unadjusted ECR will apply for the duration of the adjustment;

## SCHEDULE XXVI

## SCHEDULE OF ECONOMIC BALANCE SHEET VALUATION PRINCIPLES

## PART 1: ECONOMIC BALANCE SHEET - VALUATION PRINCIPLES

1 The economic balance sheet (EBS) shall be produced on a consolidated basis in line with GAAP principles adopted by the insurer, as notified and agreed by the Authority ('GAAP Principles') Except where specifically mentioned below, the consolidated assets and liabilities shall be assessed and fair-valued in line with the GAAP principles adopted by the insurer, as notified to and agreed by the Authority.

2 For cases where the GAAP principles permit both a fair value model and a non-economic valuation model for valuing an asset or liability, the insurer shall apply the fair value model.

3 For cases where the GAAP principles do not require an economic valuation the insurer shall fair value the asset or liability using the following hierarchy of high-level principles of valuation of assets and liabilities:
(a) quoted market prices in active markets for the same or similar assets or liabilities must be used whenever possible;
(b) where the use of quoted market prices for the same assets or liabilities is not possible, quoted market prices in active markets for similar assets and liabilities with adjustments to reflect differences shall be used;
(c) if there are no quoted market prices in active markets available, mark-to-model techniques, which are alternative valuation techniques that have to be benchmarked, extrapolated or otherwise calculated as far as possible from a market input, should be used; and
(d) maximum use must be made of relevant observable inputs and market inputs and rely as little as possible on undertaking-specific inputs, minimising the use of unobservable inputs.

4 When valuing liabilities, no adjustments shall be made to take account of the own credit standing of the insurer.

5 The insurer shall follow the GAAP principles it has adopted in the treatment of insurance contracts that do not transfer significant insurance risk.

6 The exceptions to these principles are mainly related to line items affecting the valuation of insurance technical provisions.

7 All contractual liabilities or contingent liabilities arising from off-balance sheet arrangements are to be recognised on the EBS. Contractual liabilities should be valued consistently with GAAP principles. In cases where the GAAP principles do not require fair value, the insurer should value the contractual liabilities using the valuation hierarchy in paragraph 3. Contingent liabilities shall be valued based on the expected present value of future cash flows required to settle the contingent liability over the lifetime of that contingent liability, using the basic risk-free interest rate. Where the present value of contingent obligations cannot be determined, the liability should be valued at its undiscounted value.

PART 2: TECHNICAL PROVISIONS - APPLICATION PRINCIPLES

## Proportionality, nature, scale, complexity and simplifications

8 (1) Insurers shall use methods to calculate technical provisions which are proportionate to the nature, scale and complexity of the risks underlying their insurance obligations. In determining whether a method of calculating technical provisions is proportionate, insurers shall carry out an assessment which includes an assessment of the nature, scale and complexity of the risks underlying their insurance obligations and an evaluation of the error introduced in the results of the method due to any deviation between the following:
(a) the assumptions underlying the method in relation to the risks; and
(b) the results of the assessment referred to in subparagraph 8(1);
(2) The assessment referred to in subparagraph 8(1) shall include all risks which affect the amount, timing or value of the cash in- and out-flows required to settle the insurance obligations over their lifetime. This shall include insurers taking into account, at least, the following risk characteristics, where applicable:
(a) the degree of homogeneity of the risks;
(b) the variety of different sub-risks or risk components of which the risk is comprised;
(c) the manner in which these sub-risks are interrelated with one another;
(d) the level of uncertainty of the cash flows, including the extent to which future cash flows can be estimated;
(e) the nature of the occurrence or crystallisation of the risk in terms of frequency and severity;
(f) the type of the development of claims payments over time;
(g) the extent of potential loss, including the tail of the claims distribution;
(h) the type of business from which the risks originate;
(i) the degree of dependency between different risk types, including the tail of the risk distribution; and
(j) the risk mitigation instruments applied, if any, and their impact on the underlying risk profile.
(3) A method shall be considered to be disproportionate to the nature, scale and complexity of the risks if the error referred to in subparagraph 8(1) leads to a misstatement of technical provisions or their components that could influence the decision- making or judgment of the
intended user of the information relating to the value of technical provisions, unless one of the following conditions are met:
(a) no other method with a smaller error is available and the method is not likely to result in an underestimation of the amount of technical provisions; and
(b) the method leads to an amount of technical provisions of the insurance obligations that is higher than the amount that would result from using a proportionate method and the method does not lead to an underestimation of the risk inherent in the insurance obligations that it is applied to.
(4) Where appropriate, insurers may make suitable simplifications in the calculation of technical provisions as follows:
(a) simplification methods referred to in sub-paragraph 8(4) may include:
(i) scaling, mapping to similar products to gross up;
(ii) using a deterministic model instead of stochastic model; and
(iii) performing an aggregate calculation instead of policy-by-policy calculation;
(b) simplification methods may also apply to the determination of best estimate liabilities and risk margin, including but not limited to expected losses on reinsurance recoverables due to counterparty default, reinstatement premiums on reinsurance recoverables, or application of contract boundaries.

## Application of assumptions and expert judgement relating to technical provisions

9 (1) Insurers may utilise expert judgement when applying data used in the calculation of the technical provisions, the assumptions underlying the calculations, and the method applied to derive the technical provisions.
(2) Where expert judgement is utilised by an insurer to calculate the technical provisions in accordance with subparagraph 9(1), the following additional requirements apply:
(a) the use of expert judgement shall not replace appropriate collection, processing and analysis of data;
(b) expert judgement shall not be used in isolation unless there is no reliable alternative;
(c) where expert judgement is solely utilised in accordance with point 9(2)(b), or results in a material impact on the derived best estimate, reasonable alternative assumptions are required to be tested by the insurer to ensure the selected assumption appropriately reflects the uncertainty in the outcome; and
(d) persons applying expert judgment shall have adequate experience and sufficient relevant knowledge and understanding of the subject.
(3) Insurers shall ensure that internal users, which includes, but is not limited to external service providers to whom functions or activities have been outsourced, of relevant assumptions are informed about the content, reliability and limitations of such assumptions.
(4) Where an insurer uses a model to produce projections of future financial market parameters, such model shall comply with the following requirements:
(a) it shall be risk neutral;
(b) it generates prices that are consistent with deep, liquid, and transparent financial markets;
(c) it assumes no arbitrage opportunity; and
(d) the calibration of the parameters and scenarios used is consistent with the relevant risk-free interest rate term structure used to calculate the best estimate.
(5) Assumptions used by insurers in the calculation of these technical provisions shall meet the following minimum requirements:
(a) they are clear and justified, whereby insurers have taken into account:
(i) the significance of the assumption;
(ii) any uncertainty in the use of the assumption; and
(ii) any relevant alternative assumption;
(b) they are consistent with the characteristics of the portfolio of the insurer's insurance obligations;
(c) they are used by the insurer consistently over time and within homogeneous risk groups and lines of business, without arbitrary change; and
(d) they adequately reflect any uncertainty underlying the insurer's cash flows.

PART 3: TECHNICAL PROVISIONS - GENERAL CALCULATION PRINCIPLES

## General

10 (1) Every insurer is required to establish technical provisions under these Rules, with respect to insurance obligations relating to insurance contracts.
(2) The value of technical provisions shall be equal to the sum of a best estimate and a risk margin. The two components shall be calculated separately unless the technical provisions as a whole approach, under paragraph 36, is used.

# INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024 

(3) Notwithstanding subparagraph 10(1), where cash flows associated with insurance obligations can be replicated using financial instruments, then insurers may use the market values of those financial instruments as the technical provisions.
(4) The value of technical provisions shall correspond to the current amount insurers would have to pay if they were to transfer their insurance obligations immediately to another insurer in an arm's length transaction.
(5) Insurers shall ensure that the calculation of the technical provisions shall include and be consistent with up-to-date financial market information and generally available data on insurance risks.

## Segmentation

11 (1) Insurers shall segment insurance obligations into homogeneous risk groups when calculating the technical provisions.

## Insurance obligation recognition and contract boundaries

12 (1) When calculating the technical provisions, insurers shall recognise an insurance obligation at the date an insurer becomes a party to the contract that gives rise to the obligation or the date the insurance cover begins, whichever date occurs earlier. Insurers shall only recognise the obligations within the boundary of the contract.
(2) Insurers shall no longer recognise insurance obligations referred to in subparagraph 12(1), from the date such obligations become extinguished, including but not limited to, where they are discharged, cancelled or upon the date of expiration of the insurance policy.
(3) All obligations relating to a contract of insurance will be considered by an insurer to be within the boundaries of such contract until any of the following matters arise:
(a) an insurer is no longer required to provide coverage under the contract of insurance;
(b) an insurer has the contractual right or ability to reassess the risk of a policyholder or beneficiary of a contract of insurance and, as a result, can set a price that fully reflects the revised risk; and
(c) where an insurer has the ability to reassess the risk of the portfolio that contains a contract of insurance and, as a result can set a price that fully reflects the risk of that portfolio.

## Data

13 (1) Insurers shall implement internal processes and procedures to ensure the appropriateness, completeness and accuracy of the data utilised in the calculation of technical provisions applicable to them.
(2) Where insurers have insufficient quality data to apply a reliable actuarial method to a set or subset of insurance obligations, or amounts recoverable from outwards reinsurance contracts, approximations, including case-by-case approaches, may be used in the calculation of the best estimate.

## Comparison against experience

# INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024 

14 (1) Insurers shall implement processes and procedures to ensure that the best estimate calculation, and the assumptions underlying such calculation, are regularly compared against experience.
(2) Where the review identifies systematic deviation between experience and the best estimate calculations conducted in accordance with the technical provisions Rules, the insurer shall make appropriate adjustments to the actuarial methods being used or the assumptions being made.

## PART 4: TECHNICAL PROVISIONS - BEST ESTIMATE

## Overview

15 (1) Insurers shall ensure that the best estimate calculation that is applied shal:
(a) correspond to the probability-weighted average of future cash flows discounted, using the relevant interest rate term structure;
(b) take into account the time value of money, using the relevant risk-free interest rate term structure with an appropriate illiquidity adjustment;
(c) allow for uncertainty in future cash flows, and reflect the full potential range of possible outcomes, each weighted to reflect their respective probability of occurrence; and
(d) be based upon up-to-date, reliable, and credible information and realistic current assumptions and be performed using adequate, applicable and relevant actuarial and statistical methods. At each valuation date, the insurer shall consider whether the assumptions and methods applied continue to be appropriate and justify changes or no-changes.
(2) The best estimate gross of any recoverable amounts from outwards reinsurance contracts, and the corresponding best estimate of the recoverable amounts, shall be calculated and be able to be shown separately.

## Cashflows and uncertainty in future cashflows

16 (1) The cash flows used in the calculation of the best estimate shall include all future cash in- and out-flows required to settle insurance obligations that are within the contract boundaries (as defined in paragraph 12) of the existing insurance contracts.
(2) In relation to cash flows used in the calculation of best estimates in subparagraph 16 (1), insurers shall take into account the following types of cashflows, including but not limited to:
(a) premium payments, including outwards (reinstatement or otherwise) premiums, and any additional cash flows resulting from such premiums;
(b) benefit payments, including discretionary benefits, to cedents, policyholders and beneficiaries;
(c) payments that the insurer will incur in providing contractual benefits in kind;
(d) expenses (including payments to intermediaries, claim costs, servicing costs and profit commissions) incurred in servicing insurance obligations over their lifetime;
(e) investment costs including payments between the insurer and investment firms in relation to contracts with index-linked and unit-linked benefits;
(f) payments between the insurer and intermediaries related to insurance obligations;
(g) payments for salvage and subrogation to the extent that such do not qualify as separate assets or liabilities in accordance with international accounting standards (such as IFRS or GAAP);
(h) taxation payments which are, or are expected to be, charged to policyholders and beneficiaries or are required to settle the insurance obligations;
(i) payments between the insurer and its reinsurers or other providers of risk mitigation, making due allowance for any expected shortfall in amounts to be received due to counterparty default (for whatever reason, including, but not limited to counterparty insolvency or contractual dispute);
(j) Any other cash flow items which are expected to be charged to policyholders or required to settle obligations.
(3) cash flow projections applied in the calculation of the best estimate shall take account of the following uncertainties in the cash flows, including uncertainties:
(a) in the timing, frequency and severity of insured events;
(b) in claim amounts, including uncertainty in claims inflation, and in the period needed to settle and pay claims;
(c) in the amount of expenses;
(d) in expected future developments;
(e) in policyholder behaviour;
(f) in dependency between two or more causes of uncertainty; and
(g) in dependency of cash flows on circumstances prior to the date of the cash flow.

## Expenses

17 (1) The best estimate shall reflect all cash-flows arising from expenses that will be incurred in
servicing insurance obligations. This shall include but not be limited to the following expenses:-
(a) administrative;
(b) claims management;
(c) acquisition;
(d) investment; and
(e) overhead.
(2) In relation to point $17(1)(\mathrm{e})$, overhead expenses shall include but are not limited to:
(a) salaries of general managers;
(b) auditing costs:
(c) day-to-day costs;
(d) new business development expenses; and
(e) advertising and improvements of internal processes.

# INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024 

(3) Insurers shall consider whether sufficient future new business will be sold to enable existing per policy expenses to be maintained with an appropriate rate of inflation. For closed books or declining business, consideration shall be given to whether additional expense reserves are required to reflect increasing per policy expenses as the business runs off.
(4) In the calculation of the best estimate, insurers may include investment- related expenses as a separate series of cashflows or such may be offset against the discount rate.
(5) The investment expenses in relation to subparagraph 17(1)(d) may be based on the hypothetical costs relating to a theoretical investment portfolio for business for which the Standard Approach, as defined in paragraph 27 has been adopted.
(6) Current administrative, claims management, investment as defined under subparagraph 17 (1) and overhead expenses as defined in subparagraph 17 (1) shall be projected forward by insurers using an appropriate rate of expense inflation.

## Different currencies application - best estimate calculation

18 (1) The time value of money of future cash-flows in different currencies shall be calculated by
insurers using the relevant interest rate term structure for each relevant currency.
(2) Insurers shall ensure that discounted future cash flows are converted to the reporting currency at the exchange rates in effect as of the valuation date, to obtain the best estimate.
(3) Best estimates to be calculated by currency shall be produced using material currencies and the insurer's reporting currency.
(4) Insurers shall consider data availability in creating and applying homogeneous risk groups by currency to ensure that appropriate discount rates are available in the calculation of the best estimate.

## Allowance for recoveries from outwards (re)insurance contracts

19 (1) The best estimate of inflows and outflows from outwards (re)insurance contracts shall be based on principles similar to, and consistent with, those underlying the gross (of outwards (re)insurance) best estimate.
(2) Relevant cash flows, relating to outwards (re)insurance contracts, to be considered for calculation of the best estimate requirement shall include, where applicable, reinstatement premiums required to be paid to a (re)insurer, and expenses in relation to the management and administration of outwards (re)insurance claims.
(3) Insurers shall include projected outwards reinstatement premiums within the premium provisions. When calculating the best estimate of the reinstatement premiums under subparagraph 19(2), insurers shall ensure that:
(a) they capture the uncertainty of claims experience, taking into account the likelihood and severity of all outcomes;
(b) the approach used to assess the level of reinstatement premiums is consistent with the valuation of the best estimate claims costs allowed for in the premium provisions; and
(c) the administrative expenses associated with the cost of handling the reinstatement is also included in the premium provisions.
(4) Where recoveries from outwards (re)insurance contract are not dependent directly on gross claims payments, then the insurer shall take into account any structural mismatch between gross claims payments and amounts recoverable in determining their best estimate.
(5) Insurers shall consider the potential impact of timing differences between payment of gross claims and receiving related recoveries from (re)insurers.

## Allowance for counterparty default

20 (1) The best estimate of outwards (re)insurance recoveries shall be adjusted to take account of expected losses due to counterparty default for whatever reason, including (re)insurer insolvency and contractual dispute.
(2) The adjustment shall be calculated separately as the expected present value of the change in cash-flows underlying the amounts recoverable from the counterparty, resulting from a default of the counterparty at a certain point in time. This calculation shall therefore take into account possible default events over the lifetime of the rights arising from the corresponding outwards reinsurance contract and the dependence on time of the probability of default.
(3) Insurers may make allowance for counterparty credit risk mitigation techniques they have adopted as follows:
(a) where such allowance involves the use of collateral assets, then the potential market risk on the relevant assets shall be taken into account; and
(b) where security has been obtained by way of letter of credit, guarantee or similar arrangement, then insurers shall replace the rating of the reinsurer with the rating of the security provider.

## Expected future developments

21 (1) An insurer's calculation of the best estimate shall take into account future developments, including trends, that may have a material impact on the cash in- and out-flows required to settle insurance obligations of a contract for insurance for the duration of the contract.
(2) Insurers shall regard future developments for the purposes of calculation of the best estimate requirement in subparagraph $21(1)$, to include demographic, legal, medical, technological, social, environmental and economic developments including inflation.

## Allowance for management actions

22 (1) Insurers shall ensure that the best estimate calculation reflects potential management actions (that is any action the officers of an insurer may expect to carry out under specific future circumstances) and where and to the extent required, potential changes in policyholder behaviour.
(2) Management actions shall be reflected by insurers in the valuation of the best estimate provided that the management actions :
(a) are clearly documented;
(b) have been approved by the chief executive or senior executive;
(c) are consistent with representations made to policyholders;
(d) are realistic and consistent with the insurer's current business practice and business strategy, including the use of risk-mitigation techniques where there is sufficient evidence that the insurer will change its practices or strategy, the assumed management actions are consistent with the changed practices or strategy;
(e) reflect the time and cost required to implement;

# INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024 

(f) are consistent with past evidence of similar actions in similar circumstances;
(g) are not contrary to any obligations towards policyholders and beneficiaries or to legal requirements applicable to the insurer;
(h) are consistent with each other; and
(i) are determined in an objective manner.
(3) Assumptions relating to management actions shall be relevant to the insurers operations and shall take into account all of the following matters:
(a) a comparison of assumed future management actions with management actions taken previously by the insurer;
(b) a comparison of future management actions taken into account in the current and in the past calculations of the best estimate;
(c) an assessment of the impact of changes in the assumptions on future management actions on the value of the technical provisions; and
(d) the time needed to implement the management actions and any expenses relating to them.

## Policyholder behaviour

23 (1) When determining the likelihood that policyholders will exercise contractual options, including lapses and surrenders, insurers shall conduct an analysis of past policyholder behaviour and a prospective assessment of expected policyholder behaviour.
(2) That analysis required in subparagraph 23(1) shall take into account all of the following matters:
(a) analysis of previous data on policyholder actions, if available;
(b) analysis of the degree to which it would be in the policyholder's interest to exercise the available option;
(c) changes in the operating environment;
(d) potential interaction with management actions;
(e) the influence of economic conditions;
(f) any other circumstances that are likely to influence decisions by policyholders on whether to exercise the option; and
(g) possibility of recaptures for reinsurance transactions.
(3) An insurer shall consider whether the insurance liabilities may be materially affected by either management actions or policyholder behaviour across a range of potential future economic scenarios.
(4) In relation to liabilities that may be materially affected by management action and policyholder behaviour, assumptions are required to be taken into account by an insurer across
a range of economic scenarios. Where such assumptions already exist, these are required to be reviewed by an insurer to ensure they are appropriate to be taken into account.
(5) The allowance for management action and policyholder behaviour shall be disclosed, together with information indicating the possible materiality on the calculation of the best estimate.

## Discretionary benefits

24 (1) Where future discretionary benefits depend on the assets held by the insurer, insurers shall base the calculation of the best estimate on the assets currently held by the insurer and shall assume future changes of their asset allocation in accordance with the requirements relating to management actions. Insurers shall ensure that assumptions applied on the future returns of the assets are consistent with the relevant interest rate term structure utilised.

## Valuation of material guarantees and contractual options

25 (1) When calculating the best estimate, insurers shall identify and take into account all material financial guarantees, non-financial guarantees and contractual options included in insurance contracts (whether such are contained in the insurance liabilities or the assets backing the insurance liabilities).
(2) When calculating the best estimate, insurers shall take into account all factors which may affect the likelihood that policyholders will exercise contractual options or realise the value of financial guarantees.

## Best estimate calculation method

26 (1) The best estimate shall be calculated in such a way as to ensure that the calculation method and the results that derive from it are capable of review by a qualified expert.
(2) The selection of actuarial and statistical methods utilised by insurers for the calculation of the best estimate requirement shal:
(a) reflect the risks affecting the underlying cash flows and the nature of the insurance obligations of insurer's contracts; and
(b) be consistent with, and make use of, all relevant data available for the calculation of the best estimate.
(3) Where a calculation method is based on grouped policy data, insurers shall ensure that the grouping of policies creates homogeneous risk groups that appropriately reflect the risks of the individual policies included in such groups.
(4) Insurers shall analyse the extent to which the present value of cash flows depend both on the:
(a) the expected outcome of future events and developments; and
(b) how the actual outcome in certain scenarios could deviate from the expected outcome.
(5) Where the present value of cash flows depends on future events and developments in accordance with sub-paragraph (4), insurers shall calculate the best estimate for cash flows applying methods which reflect such dependencies.

## Discounting - 'Standard Approach'

27 (1) When calculating the best estimate, insurers shall take into account the time value of money using an applicable risk-free interest rate term structure with an appropriate illiquidity adjustment. The interest rate term structure applied shall take into account a partial reflection of the illiquidity premium existing in underlying assets held and mitigate artificial volatility on its balance sheets.
(2) Risk-free discount curves and illiquidity premium adjusted risk-free discount curves relating to certain currencies shall be prescribed by the Authority on its website at www.bma.bm/ and shall be applied by the insurers which elect to use the standard approach in determining the best estimate for some or part of their liabilities.
(3) When insurers have liabilities in a currency where discount curves are not available under subparagraph $27(2)$, they should apply to the Authority under Section 6D of the Act for determining suitable discount curves for that currency.

# INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024 

(4) Where assumptions on investment returns are required for the purposes of calculating the best estimate, the investment returns shall be consistent with the relevant risk-free term structure applied by the insurer and shall take into account the illiquidity premium adjusted risk-free discount curves (as determined by the Authority) under subparagraph 27(2).

## Calculation principles specific to general business

28 (1) The best estimate for general business shall be calculated by insurers and shown separately for premium provisions, as defined in subparagraph 28 (2), and for outstanding claims provisions.
(2) The premium provisions shall relate to future claim events covered by insurance obligations falling within the contract boundary (as defined in paragraph 12).
(3) The outstanding claims provisions shall relate to claim events that have already occurred, regardless of whether the claims arising from those events have been reported or not.
(3) Insurers shall produce best estimate outstanding claims by BSCR line of business for the purposes of calculating the BSCR.
(4) Where an insurer has settled a claim and is making a series of payments over the lifetime of a policyholder or beneficiary, and the insurer is managing the claim using techniques similar to those usually employed by long-term business insurers for pay-out annuity business, then the insurer may elect to establish best estimate provisions for the outstanding claims for this business in a similar manner to a long- term business insurer.
(5) In relation to general business, insurers shall ensure that the risk margin shall not be split between premium provisions and loss and loss expense provisions.
(6) In relation to cash flows for insurance contracts with inception date after the valuation date, and the terms of the insurance contract cannot be changed unilaterally by an insurer, then such cashflows shall be included by insurers in the best estimate premium provisions as "bound but not incepted" or BBNI business.
(7) Premiums that relate to unincepted exposure (i.e.; policies which incept after the valuation date) may include:
(a) premiums written before the valuation date but incepting afterwards; and
(b) "tacit" renewals, which are renewals relating to offers that were made several months prior to the valuation date, but advice has not yet been received from the customer(s) that they wish to take them up.
(8) The insurer, when determining whether to include such business within the premium provisions, shall consider whether or not the contracts are legally enforceable or on what terms the insurer could avoid the liability associated with the exposure. If the insurer is legally obliged to write the business and is not able to materially change the terms or premium associated with the policy, then the business shall be included within the premium provisions.
(9) Allowance shall be made by insurers for events that are not adequately reflected in the data used to derive the best estimate. The expected present value of future cash-flows relating to such events is referred to as "Events Not in Data Set" (ENIDS).
(10) Insurers shall ensure that approaches to arriving at estimates of ENIDs in accordance with subparagraph 28 (10), shall be governed by well-informed assessments of the tail risks that apply to the portfolio being reviewed.

## Calculation principles specific to long-term business

29 (1) This paragraph is applicable to business that is typically managed and valued using longterm business techniques.
(2) The cash flow projections used in the calculation of best estimates for long-term business insurer obligations shall be made separately for each policy. Where the separate calculation for each policy would be a burden on the insurer, it may carry out the projection by grouping policies, provided that:
(a) There are no significant differences in the nature and complexity of the risks underlying the policies in the same group;
(b) The grouping of policies does not misrepresent the risk underlying the policies and does not misrepresent their expenses;
(c) The grouping of policies is likely to give approximately the same results for the best estimate calculation as a calculation on a per policy basis, in particular in relation to financial guarantees and contractual options included in the policies.
(3) Insurers shall ensure that no implicit or explicit surrender value floor shall be assumed for the amount of the market consistent value of liabilities for a contract.

## PART 5: TECHNICAL PROVISIONS - RISK MARGIN AND TECHNICAL PROVISIONS AS A WHOLE

## Risk margin

30 (1) The risk margin of every insurer shall be calculated to ensure that the value of its Technical Provisions is equivalent to the amount that third party insurers would be expected to require in order to take over and meet the insurance obligations.
(2) Where insurers value the best estimate and the risk margin separately, the risk margin shall be calculated by determining the cost of providing an amount of available statutory economic capital and surplus equal to the ECR necessary to support the existing insurance obligations over their lifetime.
(3) The risk margin for an insurer shall be calculated using the cost of capital approach prescribed in the remaining of paragraph 35.
(4) The risk margin for an insurer's entire portfolio of insurance obligations shall be calculated using the following formula:
$R M=\operatorname{CoC} \sum_{t \geq 0} \frac{M o d E C R_{t}}{\left(1+r_{t+1}\right)^{++1}}$
Where:
$\mathrm{CoC}=$ the Cost-of-Capital rate as prescribed by the Authority on its website at www.bma.bm;
$\operatorname{ModECR}_{t}=\quad$ the projected ECR at time t , for the insurance, credit, operational and material, non-hedgeable market risks only. It shall be calculated at the valuation date ( $\mathrm{t}=0$ ), and annually thereafter until all insurance obligations have been settled.
$r_{t}=\quad$ the risk-free discount rate, as provided by the Authority, for maturity at time $t$, for the currency in which the EBS has been prepared in.

INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024

# INSURANCE (PRUDENTIAL STANDARDS) (CLASS 3A SOLVENCY REQUIREMENT) AMENDMENT RULES 2024 

(5) Insurers shall further ensure that the calculation of the risk margin under subparagraph 35 (4) covers the full period required to run-off insurance liabilities and be discounted, applying the relevant risk-free discount curve (without the illiquidity adjustment) prescribed by the Authority;
(6) The calculation of the $\operatorname{ModECR} R_{t}$ component of the risk margin shall be calculated under the same principles as the insurer's ECR.
(7) The risk margin shall be calculated net of outwards reinsurance, at an aggregate level, separately by insurers relating to any general business or long-term business.

## Technical provisions as a whole

31 (1) Where future cash flows associated with insurance obligations can be replicated reliably using financial instruments for which a reliable market value is observable, the value of technical provisions associated with those future cash flows shall be determined on the basis of the market value of those financial instruments. Insurers are not required to provide separate calculations of the best estimate and the risk margin in connection with such cash flows.
(2) For the purpose of determining the circumstances where some or all future cash flows associated with insurance obligations can be replicated reliably using financial instruments for which a reliable market value is observable under subparagraph 36(1), insurers shall:
(a) assess whether all the criteria set out in the following three subparagraphs are met;
(b) ensure that the value of technical provisions associated with such future cash flows shall be equal to the market price of the financial instruments used in the replication; and
(c) further separate a policy into two or more components as appropriate ('unbundling') in order to satisfactorily identify liabilities for this purpose, with some parts valued 'as a whole' and others where a best estimate is calculated.
(3) The cash flows of the financial instruments shall replicate the uncertainty, in amount and timing, of the cash flows associated with the insurance obligations in relation to the risks underlying the cash flows associated with the insurance obligations in all possible scenarios. The cash flows of the financial instruments must, therefore, provide not only the same expected amount as the cash flows associated with the insurance obligations but also the same pattern of variability.
(4) The following cash flows associated with insurance obligations shall not be regarded by the Authority as able to be replicated in a reliable manner by an insurer:
(a) cash flows associated with insurance obligations that depend on the likelihood that policyholders will exercise contractual options, including lapses and surrenders;
(b) cash flows associated with insurance obligations that depend on the level, trend, or volatility of mortality, disability, sickness and morbidity rates; and
(c) all expenses that will be incurred in servicing insurance obligations.
(5) For insurers to use financial instruments in replications, these shall be traded in active, deep, liquid and transparent markets
